# **Academic Program and Course Description Guide for Petroleum Engineering Department**

## Academic Program Description Form

University Name: Al-Farabi University College.

Faculty/Institute: Al-Farabi University College.

Scientific Department: ...Petroleum Engineering Department

Academic or Professional Program Name: BSc. in Petroleum Engineering

Final Certificate Name: Bsc in Petroleum Engineering

Academic System: Yearly

Description Preparation Date: 1-9-2023

File Completion Date: 7-4-2024

Signature:

Head of Department Name:

Dr. Khalid AL-Qayim  
Date: 07/04/2024

Signature:

Scientific Associate Name:

Dr. Adnan AL Azzawi  
Date: 07.04.2024

The file is checked by:

Department of Quality Assurance and University Performance

Director of the Quality Assurance and University Performance Department:

Date: 07/04/2024

Signature: Dr. Khalidah AL-Qayim

Approval of the Dean

Prof. Dr. Ahmed Al-Garhan

## **Academic Program Description:**

### **VISION**

The vision of the Department of Petroleum Engineering is to become the leader in petroleum engineering education in Iraq creating the most respected, prestigious, and qualified graduates.

### **MISSION**

The Mission of the Petroleum Engineering Program is to provide the necessary skills at the undergraduate level to discover and develop new techniques and processes for the efficient and economical extraction of oil and gas resources consistent with human health, ethics, safety and environmental needs. Also, to encourage our students for continuing education to serve the country in developing conventional and unconventional hydrocarbon resources.

### **OBJECTIVES**

Graduates of the Petroleum Engineering Program will exhibit proficiency and excellence in the following attributes:

- Skills to use modern engineering tools and techniques to identify and solve technical problems associated with the production and management of oil and gas resources.
- Able to appreciate and function within economic, environmental, societal and ethical constraints.
- Able to create, assimilate, synthesize and communicate knowledge effectively of scientific and engineering principles and the application of these principles in solving petroleum and natural gas engineering problems using modern tools.
- Able to work effectively in multi-disciplinary teams in diverse environments and exhibit effective communication skills.
- Able to adapt to change through life-long learning.

### **Adopted Graduate Outcomes**

1a- An ability to distinguish, identify, define, formulate, and solve engineering problems by applying principles of engineering, science and mathematics.

2a- An ability to perceive the continual necessity for professional knowledge growth and how to find access, assemble and apply it properly.

3a- An ability to skillfully communicate orally with a gathering of people and in writing with various managerial levels.

4a- A ability to work adequately on teams and to set up objectives, plan activities , meet due dates, and manage risk and uncertainty.

5a- An ability to perceive ethical and professional responsibilities in engineering cases and make brilliant judgments taking into account the sequences in worldwide financial

### **Course Description:**

Over the years, students from around the country have pursued their engineering degree with us, taking advantage of the opportunity to learn one-on-one from outstanding faculty. Our faculty create innovative and rigorous research opportunities for undergraduate students. With faculty members who have worked around the world, a petroleum engineering education here means you are prepared for continued education, public service, and life-long learning. Petroleum engineering is of vital importance to Iraq's future, so we prepare Petroleum engineers involved in all facets of oil exploration and development, from identifying and characterizing the reservoir through drilling and completion to production. Petroleum engineers also find new ways to extract oil and gas from older wells. We offer courses that prepare students for careers in petroleum and energy-resource fields. Courses in petroleum engineering deal with drilling, production, reservoir engineering formation evaluation, computer simulation and enhanced oil recovery together with the Basic Engineering Courses. The curriculum prepares graduates to meet the demands of modern technology while emphasizing, whenever possible, the special problems encountered in Iraqi petroleum fields. You'll have the opportunity to joining the student chapter of the Society of Petroleum Engineers (SPE) namely, Al Farabi SPE Student chapter. Our chapter is actively involved in inviting academic faculty and industry professionals to present short courses , workshops and to talk about future career in this profession. Students graduating from the petroleum engineering program will be well prepared to serve the industry and themselves, through their technical knowledge, ethical considerations, participation in professional societies and desire for life-long learning.

2.1.2 Statement of PEOs.

**Program Vision:**

The vision of the Department of Petroleum Engineering is to become the leader in petroleum engineering education in Iraq creating the most respected, prestigious, and qualified graduates.

**Program Mission:**

The Mission of the Petroleum Engineering Program is to provide the necessary skills at the undergraduate level to discover develop new techniques and processes for the efficient and economical extraction of oil and gas resources consistent with human health, ethics, safety and environmental needs. Also, to encourage our students for continuing education to serve the country in developing conventional and unconventional hydrocarbon resources.

**Program Objectives:**

Graduates of the Petroleum Engineering Program will exhibit proficiency and excellence in the following attributes:

- Skills to use modern engineering tools and techniques to identify and solve technical problems associated with the production and management of oil and gas resources.
- Able to appreciate and function within economic, environmental, societal and ethical constraints.
- Able to create, assimilate, synthesize and communicate knowledge effectively of scientific and engineering principles and the application of these principles in solving petroleum and natural gas engineering problems using modern tools.
- Able to work effectively in multi-disciplinary teams in diverse environments and exhibit effective communication skills.
- Able to adapt to change through life-long learning.

They are statements that describe what the academic program intends to achieve within a specific period of time and are measurable and observable.

## Curriculum Structure:

| List all courses in the program by term starting with the first term of the first year and ending with the last term of the final year. |       |  | Indicate Whether Course is Required , Elective or a Selected Elective by an R, an E or an SE. <sup>1</sup> | Offered: Year and Semester or Quarter | Maximum Section Enrollment for the Last Two Terms the Course was Offered <sup>2</sup> |

### **Learning Outcomes:**

1. An ability to distinguish, identify, define and formulate engineering problems at the field by applying principles of petroleum engineering with the suitable solutions depending on the theoretical background.
2. An ability to perceive the continual necessity for professional knowledge growth and how to find access, assemble and apply it properly.
3. An ability to prepare a final report about field operations constituting the challenges and the main data obtained.
4. An ability to work adequately on teams at the locations and to set up objectives, plan activities, meet due dates, and manage risk and uncertainty.
5. An ability to perceive ethical and professional responsibilities in engineering cases and make brilliant judgments.
6. An ability to control the instantaneous events in the oil field during drilling operations, production stage and in field management.

**Teaching and learning strategies:**

Faculty members used the modern instruments to develop the convey of the information to the undergraduate students, these strategies include the modern screen supported by the videos to explore the operation occur in the fields. In addition, students are arrangements into groups to arrange a presentation for more enthusiastic and active class.

### **1. Program Vision**

The vision of the Department of Petroleum Engineering is to become the leader in petroleum engineering education in Iraq creating the most respected, prestigious, and qualified graduates

### **2. Program Mission**

**The Mission of the Petroleum Engineering Program is to provide the necessary skills at the undergraduate level to develop new techniques and processes for the efficient and economical extraction of oil and gas resources consistent with human health, ethics, safety and environmental needs. Also, to encourage our students for continuing education to serve the country in developing conventional and unconventional hydrocarbon resources.**

### **3. Program Objectives**

- Skills to use modern engineering tools and techniques to identify and solve technical problems associated with the production and management of oil and gas resources.**
- Able to appreciate and function within economic, environmental, societal and ethical constraints.**
- Able to create, assimilate, synthesize and communicate knowledge effectively of scientific and engineering principles and the application of these principles in solving petroleum and natural gas engineering problems using modern tools.**
- Able to work effectively in multi-disciplinary teams in**

**diverse environments and exhibit effective communication skills.**

- **Able to adapt to change through life-long learning.**

#### **4. Program Accreditation**

Does the program have program accreditation? And from which agency? no

#### **5. Other external influences**

Is there a sponsor for the program?

no

#### **6. Program Structure**

| <b>Program Structure</b>        | <b>Number of Courses</b> | <b>Credit hours</b> | <b>Percentage</b> | <b>Reviews*</b> |

| 8. Expected learning outcomes of the program |   |
|--|---|
| <b>Knowledge</b>                             |   |
| Learning Outcomes 1                          | An ability to distinguish, identify, define, formulate, and solve engineering problems by applying principles of engineering, science and mathematics.                      |
| <b>Skills</b>                                |   |
| Learning Outcomes 2                          | An ability to perceive the continual necessity for professional knowledge growth and how to find access, assemble and apply it properly.                                    |
| Learning Outcomes 3                          | An ability to skillfully communicate orally with a gathering of people and in writing with various managerial levels.   |
| <b>Ethics</b>                                |   |
| Learning Outcomes 4                          | A ability to work adequately on teams and to set up objectives, plan activities, meet due dates, and manage risk and uncertainty.   |
| Learning Outcomes 5                          | An ability to perceive ethical and professional responsibilities in engineering cases and make brilliant judgments taking into account the sequences in worldwide financial |

| 9. Teaching and Learning Strategies   |
|---|
| Teaching and learning strategies and methods adopted in the implementation of the program in general. |

| 10. Evaluation methods   |
|--|
| Students are evaluated by direct discussion, written exams, oral exam, reports and monthly exams |

### Professional Development

#### Mentoring new faculty members

New faculty is exposed to concentrate following and guiding by instructing them on the uniform manner and the ideal manner of convey information and how dealing with students, evaluation them and how to control the class discussions.

#### Professional development of faculty members

Faculty members always exposed to continuous dealing with the latest technological method of teaching and learning strategies. They constantly join the training programs arranged by the ministry of education and higher education.

## 12. Acceptance Criterion

The enrollment of the petroleum program is central through ministry of higher education and scientific research by admitting the students graduated from the scientific Baccalaureate branch.

### 13. The most important sources of information about the program

**Phone No. 07712365333**

**Facebook:** <https://web.facebook.com/alfarabiuc.edu.iq>

**Website:** [www.alfarabiuc.edu.iq](http://www.alfarabiuc.edu.iq)

**E-mail:** [info@alfarabiuc.edu.iq](mailto:info@alfarabiuc.edu.iq)

### 14. Program Development Plan

- a.** Create a communicative group for the academic staff with a head of the educational program in order to discuss and solve all the challenges that face the development of the educational system.
- b.** facilitate the educational labs. With latest technological equipment. facilitate the educational institution with a network to enhance the E-Learning processes.
- c.** Attract an academic staff from authentic universities to raise the level of the learning quality.
- d.** Support the lectures with recording videos created by the instructor to be available for the review purposes for the students.
- e.** Provide the library with rich references that convey the student with the latest scientific approaches.

| Program Skills Outline |             |  |                   |                                    |    |    |    |        |    |    |    |        |    |    |    |
|------------------------|-------------|--|-------------------|------------------------------------|----|----|----|--------|----|----|----|--------|----|----|----|
|                        |             |  |                   | Required program Learning outcomes |    |    |    |        |    |    |    |        |    |    |    |

## (General Geology)

# Syllabus

### Course Description

Earth in space , surface relief of the interior of the earth, materials and minerals , igneous rocks , sedimentary rocks , metamorphic rocks, weathering and soil , ground water, structural geology and mountain building, earthquakes and earth interior, keys to the past, time in geology and geological time scale, historical geology and plate tectonic and continental drift.

|                        |   |
|------------------------|---|
| 1. Institution Name    | Al-Farabi University College                  |
| 2. Department Name     | Petroleum Engineering Department              |
| 3. Course Code & Name  | PE100 General Geology                         |
| 4. Lecture Type        | Theoretical and laboratory lectures           |
| 5. Semester/Year       | yearly  |
| 6. No. of credit hours | 3 hrs per week theory and 2 hrs per week lab. |
| 7. Instructor Name     | Muzahim Aziz Basi                             |

## 8. Course Objectives:

1. Understanding geology
2. Importance of geology to petroleum engineering

## 9. Student Learning Outcomes, Teaching/Learning Methods, and Assessment

**A. Knowledge Outcomes:** Upon completion of the course, students should be able to:

1. Identify the various types of minerals and rocks
2. Understanding the various types of structural geology.
3. Understanding the types of porosity and permeability
4. Make correlation between the wells.

**B. Skills Outcomes:** Upon completion of the course, students should be able to:

1. Know and discuss different types of minerals and rocks and also to discuss different subjects of geology
2. Write geological reports

### Teaching/learning methods

1. Lectures..
2. Discussion
3. Answering the questions
4. Solve some geological problems

### Assessment methods

1. Monthly exams
2. Participation of the students in the lectures
3. Written quizzes
4. Oral quizzes

**C. Affective value outcomes:** Upon completion of the course, students should be able to apply:

1. best methods to study geology
2. Critical Thinking

### **Teaching/learning methods**

1. brain storming
2. encourage critical thinking.

### **Assessment methods**

1. exams
2. written quizzes

### **D. Life learning outcomes: Upon completion of the course, students should be able to:**

1. write academic reports
2. work within team
3. plan and organize time of study
4. initiate new ideas and motivate the others .

## **10. Grading**

1.
  1. final exam 50%
  2. quizzes 10%
  3. term test 20%
  4. laboratory 20%

## 11. Course Content

| Week No. | No. of hours | Reference  | Topic                                    |
|----------|--------------|--|--|
| 1        | 3            | <b>1. 1.plummer, Ch .C , Carlson, DH. And Mc. Geary , D. (2007). Physical geology. Mc. Graw Hill Higher Education. 617 pp.</b><br><br><b>2. Montgomery C.W .1997. fundamentals</b> | introduction                             |
| 2        | 3            |  | Earth in space                           |
| 3        | 3            |  | Surface relief and interior of the earth |
| 4        | 3            |  | Materials and minerals                   |
| 5        | 3            |  | Materials and minerals                   |
| 6        | 3            |  | Igneous rocks                            |
| 7        | 3            |  | Igneous rocks                            |
| 8        | 3            |  | Sedimentary rocks                        |
| 9        | 3            |  | Sedimentary rocks                        |
| 10       | 3            |  | Sedimentary rocks                        |
| 11       | 3            |  | Examination                              |
| 12       | 3            |  | Metamorphic rocks                        |
| 13       | 3            |  | Weathering and soil                      |
| 14       | 3            |  | Weathering and soil                      |
| 15       | 3            |  | Processes of erosion and environment     |

## 12. References

|  |   |
|--|---|
| <b>1. Textbooks</b>  | Basi ,M.A. 2017 introduction to geology, 50 pp. Al Farabi university college.   |

## Course Description Form

|  |  |
|--|--|
| 1. Course Name: Mathematics I  |  |
|  |  |
| 2. Course Code:  |  |
| GE 102   |  |
| 3. Semester / Year:  |  |
| 2024-2024  |  |
| 4. Description Preparation Date:   |  |
| 2024/12/5  |  |
| 5. Available Attendance Forms:   |  |
| Paper form ,excel form   |  |
| 6. Number of Credit Hours (Total) / Number of Units (Total)                    |  |
| (4 hr./week)   |  |
| 7. Course administrator's name (mention all, if more than one name)            |  |
| Name: Assistant Lecturer khattab imad<br>Email: khattab.emad@alfarabiuc.edu.iq |  |
| 8. Course Objectives   |  |
| Course Objectives  | <ul style="list-style-type: none"><li>-Understanding, predicting and optimizing engineering systems That deterministic and are modeled using differential equations.</li><li>-Providing an introduction to differential equations and Their solutions and statistics.</li><li>-Bringing the knowledge gained and making the connection between theoretical knowledge taught in Textbooks/homework problems.</li></ul> <b>etc.,</b> |

## 9. Teaching and Learning Strategies

|                 |   |
|-----------------|---|
| <b>Strategy</b> | <b>1. Lectures. 2. Class problem solving 3. Online discussion etc.,</b> |
|-----------------|---|

## 10. Course Structure

| <b>Week</b> | <b>Hours</b> | <b>Required Learning Outcomes</b>  | <b>Unit or subject name</b> | <b>Learning method</b> | <b>Evaluation method</b>        |
|-------------|--------------|--|-----------------------------|------------------------|---------------------------------|
| 1-3         | 12           | Solve Trigonometric functions, inverse trigonometric functions, logarithmic functions, exponential functions, transcendental functions, other types of functions, Graph of functions). | Types of Functions          | Lectures.              | Quiz<br>Class work<br>Home work |
| 3-7         | 16           | Solve Explicit and implicit, application of derivatives graphing   | Differentiation             | Lectures.              | Quiz<br>Class work<br>Home work |
| 6-8         | 8            | Integrals as a summation of areas, Definite Integrals, Application of Definite Integral, Areas and Volumes, Techniques of Integration  | Integration                 | Lectures.              | Quiz<br>Class work<br>Home work |
| 8-10        | 8            | Solve matrices and find The determinant  | Determinants and Matrices.  | Lectures.              | Quiz<br>Class work<br>Home work |
| 10-12       | 8            | Understand Conical Section and solve area  | Conical Section.            | Lectures.              | Quiz<br>Class work<br>Home work |
| 12-14       | 8            | Understand polar Coordinates and solve Conversion  | Polar Coordinates.          | Lectures.              | Quiz<br>Class work<br>Home work |

## 11. Course Evaluation

Distributing the score out of 100 according to the tasks assigned to the student such as daily preparation, daily oral, monthly, or written exams, reports .... etc

## 12. Learning and Teaching Resources

|   |  |
|---|--|
| Required textbooks (curricular books, if any)                         | <b>Calculus 008 Edition, Kindle Edition<br/>by James Stewart.</b>  |
| Main references (sources)   | <b>Thomas' Calculus 14th Edition by<br/>Joel Hass, Christopher Heil, Maurice Weir</b>  |
| Recommended books and references<br>(scientific journals, reports...) | <b>Vector Algebra and Calculus: Stephen Robe<br/>Fuente: University of Oxford</b>  |
| Electronic References, Websites                                       | <b>1. <a href="https://www.infobooks.org/free-calculus-books-pdf/">https://www.infobooks.org/free-calculus-books-pdf/</a><br/>2. <a href="https://people.math.harvard.edu/~shlomo/docs/Advanced_Calculus.pdf">https://people.math.harvard.edu/~shlomo/docs/Advanced_Calculus.pdf</a></b> |

قسم هندسة النفط

## Physics Syllabus

- 1. Energy and its Conservation:** (Energy, Work, Power, Gravitational Potential Energy, Kinetic Energy, Conservation of Energy).
- 2. Simple Harmonic Motion:** (Periodic Motion, Simple Harmonic Motion, Potential Energy of a spring), Conservation of Energy and Vibrating Spring.
- 3. Wave Motion:** (Mathematical Representation of a Wave, Sound wave, Speed of Transverse Wave on a String, Reflection of a wave at a Boundary, The transmission of Energy in a Wave and the intensity of a Wave).
- 4. Fluids:** (Density, Pressure, Pascal's Principles, Archimedes' Principle, Equation of Continuity, Bernoulli's Theorem, Viscosity, Stress and Strain).
- 5. Surface Tension:** (Interfacial Tension, Contact Angel, Wetting Phenomena, Capillary Pressure).
- 6. Heat Transfer:** (Conduction, Convection and Radiation).

|                                  |   |
|----------------------------------|---|
| <b>1. Institution Name</b>       | <b>Al-Farabi University College</b>         |
| <b>2. Department Name</b>        | <b>Petroleum Engineering Department</b>     |
| <b>3. Course Code &amp; Name</b> | <b>GE114 Physics</b>                        |
| <b>4. Lecture Type</b>           | <b>Hard and Soft</b>                        |
| <b>5. Semester/Year</b>          | <b>Annual / 2020-2021</b>                   |
| <b>6. No. of credit hours</b>    | <b>60 hr (2 hr/week)</b>                    |
| <b>7. Instructor Name</b>        | <b>Assistant Lecturer Tiba Nayyef Jasim</b> |

## 8. Course Objectives:

1. Providing an understanding of the classic and modern physical principles.
2. Developing critical thinking and quantitative reasoning skills.
3. Empowering creatively and critically to analyze scientific problems.
4. Bringing the knowledge gained and making the connection between theoretical knowledge taught in textbooks/homework problems.

etc.,

## 9. Student Learning Outcomes, Teaching/Learning Methods, and Assessment

**A. Knowledge Outcomes:** Upon completion of the course, students should be able to:

1. Concern the fundamentals in the basic areas of physics (Energy, Work, Power, Simple Harmonic Motion, Wave Motion Density, Pressure, Viscosity, and Stress and Strain).
2. Derive, and proving equations that describe physics topics.
3. Analyse physical insight into various physical problems.
4. Understand of how energy (heat or mass) transfers, to reveal the underlying physical principals.

etc.,

**B. Skills Outcomes:** Upon completion of the course, students should be able to:

1. Acquire the skills to apply principles to new problems.
2. Use Physics to predict and estimate practical situations.
3. Solve problems competently by identifying the essential parts of a problem and formulating a strategy for solving the problem.
4. Apply appropriate techniques to arrive at a solution, and interpret the results.
5. Explain the physics problem and its solution in both words and appropriately specific equations to both experts and non-experts.

etc.,

### Teaching/learning methods

1. Lectures.
2. Class problem solving.
3. Video lectures
4. Online discussion

etc.,

### Assessment methods

1. Homework problem.

2. Monthly exam.

3. Quizzes.

**C. Affective value outcomes:** Upon completion of the course, students should be able to apply:

1. best methods to study natural sciences

2. Critical Thinking

3. Analytical methods in solving problems.

etc.,

### Teaching/learning methods

1. Brain storming.

2. Encourage Critical thinking.

3. Encourage analytical thinking strategy.

4. Introduce correct research methodologies.

etc.,

### Assessment methods

1. Exams.

2. Student feedback.

3. Problem recognition type.

4. Assessing skill in problem solving.

etc.,

**D. Life learning outcomes:** Upon completion of the course, students should be able to:

1) Work within teams

2) Write academic reports

3) Analyse and verify scientific facts

4) Plan and organize time of study

5) Initiate new ideas and motivate others

6) conduct targeted searches of scholarly literature.

etc.,

## 10. Grading

|                          |      |
|--------------------------|------|
| 1. Quizzes (2 X 4)       | 8 %  |
| 2. Discussion ( 1 X 5)   | 5 %  |
| 3. Monthly Exams (2 X 6) | 12 % |
| 4. Home Works (1 X 5)    | 5 %  |
| 5. Final Exam            | 70 % |

## 11. Course Content

| Week No. | No. of hours | Reference   | Topic                         |
|----------|--------------|---|-------------------------------|
| 1 - 4    | 8            | Physics for Scientists and Engineering with modern Physics, Raymond A. Serway., SAUNDERS GOLDEN SUNBRUST SERIES , SAUNDERS COLLEGE PUBLISHING , 2004. | Work, Energy and Power        |
| 5        | 2            | -   | Lessons Review + Quiz         |
| 6 - 9    | 8            | Fundamentals of Physics, Binder Ready Version 10th Edition David Halliday, Robert Resnick ,Jearl Walker Wiley; 10 edition 2013                        | Simple Harmonic Motion        |
| 10       | 2            | -   | Lessons Review + Monthly Exam |
| 11 - 14  | 8            | The Physics of Vibrations and Waves H.J. Pain John Wiley & Sons, Sussex 1999  | Wave Motion                   |
| 15       | 2            | -   | Lessons Review + Quiz         |
| 16 - 19  | 8            | Physical Chemistry, R. A. Silbey, R. A. Alberty, M. G. Bawendi, Wiley & Sons, 2005.   | Fluids                        |
| 20       | 2            | -   | Lessons Review + Quiz         |
| 21 - 24  | 8            | Physics for scientists and engineering R. Serway; Brooks Cole ; (9 edition or any recent edition) 2013  | Surface Tension               |
| 25       | 2            | -   | Lessons Review + Monthly Exam |
| 26 -29   | 8            | Fundamentals of Statistical and Thermal Physics, Reif F. McGraw Hill, Int. Edition, Physics Series , USA. 1985  | Heat Transfer                 |
| 30       | 2            | -   | Lessons Review + Quiz         |

### 13. Course improvement plan

1. Inserting the Practical side to make the theoretical side more understandable.
2. Inserting the electronic education as a basic activity.
3. Providing modern textbooks.

## وصف مقرر مادة اللغة العربية

### وصف المنهج:

وَضِعَ هذا المنهج لتزويد الطلاب بقواعد اللغة العربية النحويّة والإملائيّة ، وكذلك تدريب الطلاب على استخدام قواعد اللغة العربية أثناء القراءة والكتابة والتعبير ، وتطبيقها على النصوص الشعريّة والنثريّة

|                      |                               |
|----------------------|-------------------------------|
| 1. المؤسسة التعليمية | كلية الفارابي الجامعة         |
| 2. القسم العلمي.     | هندسة نفط                     |
| 3. اسم / رمز المقرر  | اللغة العربية                 |
| 4. نوع المحاضرة      | الالكتروني                    |
| 5. الفصل / السنة     | الفصل الأول / 2021            |
| 6. الساعات المعتمدة  | 6 ساعات أسبوعيا               |
| 7. اسم التدريسي      | م.م الاء عبد القادر خلف محمود |

## 8. أهداف المقرر

في نهاية الفصل الاول سيتمكن الطلاب من :

1. معرفة الطلاب للقواعد الاملائية الأساسية للغة العربية.
2. معرفة الطلاب للقواعد النحوية الأساسية للغة العربية.
3. تطبيق الطلاب لتلك القواعد على النصوص الشعرية والنثرية.

## 9. مخرجات المقرر وطرائق التعليم والتعلم

أ- المخرجات المعرفية :

1. المعرفة .

2. الفهم (الاستيعاب).

3. التطبيق.

4. التحليل.

5. التركيب.

6. التقويم.

ب - المخرجات المهاراتية الخاصة بالمقرر:

1. معرفة الطالب بقواعد اللغة العربية الاملائية والنحوية .

2. تطبيق تلك القواعد بالشكل المطلوب .

ب - المخرجات المهاراتية الخاصة بالمقرر:

1. معرفة الطالب بقواعد اللغة العربية الاملائية والنحوية .

2. تطبيق تلك القواعد بالشكل المطلوب .

ج- المخرجات الوجدانية والقيمية:

1. أن يحب الطالب مادة اللغة العربية.

2. أن يحب الطالب اسلوب مدرس اللغة العربية في عرض المادة الدراسية .

3. أن يتفاعل الطالب مع طريقة عرض المادة الدراسية من قبل مدرس المادة

10. استراتيجيات التدريس للمقرر

1. طرائق التعليم والتعلم :

( المحاضرة والمناقشة والاستجواب).

2. طرائق التقييم :

1. الاختبارات الشفهية .

2. الاختبارات التحريرية ( المقالية والموضوعية).

## 10. محتوى المقرر

| الاسبوع | الساعات | اسم الوحدة أو الموضوع          |  |
|---------|---------|--------------------------------|--|
| 1       | 2       | همزة الوصل وهمزة القطع         |  |
| 2       | 2       | الهمزة الوسطى                  |  |
| 3       | 2       | علامات الترقيم                 |  |
| 4       | 2       | الفعل وأنواعه في اللغة العربية |  |
| 5       | 2       | جزم الفعل المضارع              |  |
| 6       | 2       | كان وأخواتها                   |  |
| 7       | 2       | جمع المذكر السالم وما يلحق به  |  |
| 8       | 2       | جمع المؤنث السالم وما يلحق به  |  |
| 9       | 2       | التاء الطويلة والتاء المربوطة  |  |
| 10      | 2       | المبتدأ والخبر                 |  |
| 11      | 2       | الفاعل                         |  |
| 12      | 2       | ان وأخواتها                    |  |
| 13      | 2       | الأفعال الخمسة                 |  |
| 14      | 2       | الأسماء الخمسة                 |  |
| 15      | 2       | المفعول المطلق                 |  |

## 11. المصادر والمراجع

1. الوجيز في قواعد الإملاء والانشاء ، تأليف : عبدالله أنيس الطباع و د. عمر أنيس الطباع
- 2 . النحو العربي أحكام ومعان ، تأليف : محمد فاضل السامرائي.
3. الموجز في قواعد اللغة العربية ، تأليف : د. سعيد الأفغاني .

## **11. خطة تطوير المقرر الدراسي**

1. التطوير على المحتوى الدراسي بالحذف والاضافة والاستبدال .
- 2- استعمال طرائق تدريسية حديثة حسب طبيعة المادة ومستوى الطلبة بين الحين والآخر.

( 1<sup>st</sup> year **ENGLISH LANGUAGE**)

## Syllabus

**Course Description:** course include a complete revision on the language the students have studied in their past studies.

|                        |                                  |
|------------------------|----------------------------------|
| 1. Institution Name    | Al-Farabi University College     |
| 2. Department Name     | Petroleum Engineering Department |
| 3. Course Code & Name  | English language - GE110         |
| 4. Lecture Type        | Theoretical lectures             |
| 5. Semester/Year       | Year                             |
| 6. No. of credit hours | 1                                |
| 7. Instructor Name     | Dr. Zuhair D. AL shaikh          |

## 8. Course Objectives:

1. To enable first year students to read and write suitable sentences.
- 2.
- 3.
- 4.
- etc.,

## 9. Student Learning Outcomes, Teaching/Learning Methods, and Assessment

**A. Knowledge Outcomes:** Upon completion of the course, students should be able to:

1. To enable first year students to read and write suitable sentences
  - 2.
  - 3.
- etc.,

**B. Skills Outcomes:** Upon completion of the course, students should be able to:

1. To write a reasonable composition.
  - 2.
  - 3.
  - 4.
- etc.,

**Teaching/learning methods** All methods

1. Lectures.
  2. Class problem solving.
  3. Discussion
  - 4.
- etc.,

### Assessment. ( All methods)

1. homework problem sets,
  2. exams
  3. lab reports
  - 4.
- etc.,

**C. Affective value outcomes: Upon completion of the course, students should be able to apply:**

1. **best methods to study natural sciences**

**Teaching/learning methods ( as above)**

- 1.
  - 2.
  - 3.
  - 4.
- etc.,

**Assessment methods (as above)**

- 1.
  - 2.
  - 3.
  - 4.
- etc.,

**D. Life learning outcomes: Upon completion of the course, students should be able to: (**

1. **As above**
  - 2.
  - 3.
  - 4.
- etc.,

## **10. Grading**

1. **30% yearly**
  2. **70 % final exam**
  - 2.
  - 3.
  - 4.
- etc.,

## 11. Course Content

| Week No. | No. of hours | Reference | Topic                          |
|----------|--------------|-----------|--------------------------------|
| 1        | 10           | 1         | From unit one to unit five     |
| 2        |              |           |                                |
| 3        |              |           |                                |
| 4        |              |           |                                |
| 5        |              |           |                                |

قسم هندسة النفط

## (Static and Dynamic)

# Syllabus

### Course Description:

#### Part I Statics

(principles of statics, moment, Resultants of force systems, friction, centers of gravity, moment of inertia)

#### Part II Dynamics

(Principles of Dynamics, Rectilinear motion, Curvilinear motion, Rotation, Energy and work, mechanical vibration)

|                        |                                      |
|------------------------|--------------------------------------|
| 1. Institution Name    | Al-Farabi University College         |
| 2. Department Name     | Petroleum Engineering Department     |
| 3. Course Code & Name  | GE108 Static and Dynamic             |
| 4. Lecture Type        | 3 hr /wk                             |
| 5. Semester/Year       | year                                 |
| 6. No. of credit hours | 3 hours                              |
| 7. Instructor Name     | M.Sc. Marwa Hassan Ibrahim Al-bayati |

## 8. Course Objectives:

1. To develop an understanding of the fundamentals and principles of engineering mechanics: statics and dynamics of particles and rigid bodies in two and three dimensions including: kinematics and kinetics of particles and rigid bodies in 2D and 3D motion, rotations, translations, oscillations.
2. Learn to solve equilibrium of rigid bodies including the calculations of moment of force, inertia moments of solid bodies, and basic structural analysis, and be able to determine the requirement for the equilibrium of particles and solid bodies.
3. To develop the ability to apply Newtonian mechanics to model and predict the responses of simple dynamical system (particle and rigid body) subjected to applied forces.

## 9. Student Learning Outcomes, Teaching/Learning Methods, and Assessment

**A. Knowledge Outcomes:** Upon completion of the course, students should be able to:

1. To develop problem solving skills in engineering mechanics through the application of concepts in statics and dynamics to complex problems.

**B. Skills Outcomes:** Upon completion of the course, students should be able to:

1. To familiarize the student with the skills required in their workplace as petroleum engineers
2. the student can link topics and choose the appropriate

**Teaching/learning methods** (put your methods of teaching)

1. Lectures.
2. Class problem solving.
3. Discussion

**Assessment methods** (write your assessment methods)

1. homework problem sets,
2. exams

**C. Affective value outcomes:** Upon completion of the course, students should be able to apply:

1. best methods to study natural sciences
2. Critical Thinking
3. Analytical methods in solving problems

### **Teaching/learning methods**

1. Brain storming
2. Encourage Critical thinking
3. Encourage analytical thinking strategy
4. Introduce correct research methodologies

### **Assessment methods**

1. Exams
2. Student feedback
3. body language

### **D. Life learning outcomes: Upon completion of the course, students should be able to:**

1. Work within teams
2. Write academic reports
3. Analyse and verify scientific facts
4. Plan and organize time of study
5. Initiate new ideas and motivate others
6. conduct targeted searches of scholarly literature.

## **10. Grading**

1. Quizzes 10%
2. E-learning participation 5%
3. Midterm exam 15%
4. Final 70%

## 11. Course Content

| 4. Lecture Type        | 4 hr /wk                             |
| 5. Semester/Year       | year                                 |
| 6. No. of credit hours | 4 hours                              |
| 7. Instructor Name     | M.Sc. Marwa Hassan Ibrahim Al-bayati |

## 8. Course Objectives

1. Learning objectives include

- o Computer Components
- o Programming planning and documentation
- o Data types and basic mathematical operations
- o Structured programming

## 9. Student Learning Outcomes, Teaching/Learning Methods, and Assessment

**A. Knowledge Outcomes:** Upon completion of the course, students should be able to:

1. demonstrate the ability to communicate in a professional manner.
2. exhibit the ability to work in terms / groups effectively.

**B. Skills Outcomes:** Upon completion of the course, students should be able to:

1. To familiarize the student with the skills required in their workplace as petroleum engineers
2. the student can link topics and choose the appropriate

### Teaching/learning methods (put your methods of teaching)

1. Lectures.
2. Class problem solving.
3. Discussion

### Assessment methods (write your assessment methods)

1. homework problem sets,
2. exams

**C. Affective value outcomes:** Upon completion of the course, students should be able to apply:

1. best methods to study natural sciences
2. Critical Thinking
3. Analytical methods in solving problems

### Teaching/learning methods

1. Brain storming
2. Encourage Critical thinking
3. Encourage analytical thinking strategy
4. Introduce correct research methodologies

### Assessment methods

- 1.Exams
2. Student feedback
3. body language

D. Life learning outcomes: Upon completion of the course, students should be able to:

1. Work within teams
2. Write academic reports
3. Analyse and verify scientific facts
4. Plan and organize time of study
5. Initiate new ideas and motivate others
6. conduct targeted searches of scholarly literature.

## 10. Course Content

| Week No. | No. of hours | Reference | Topic  |
|----------|--------------|-----------|--|
| 1        | 4            |           | Elements of a computer.  |
| 2-4      | 4            |           | Windows system( history, elements, functions, applications, special types) |

قسم هندسة النفط

# Mathematics II

## Syllabus

- 1. Polar coordinates** (graphs in Polar coordinates, arc length and areas in Polar coordinates).
- 2. Vectors in two and three space** (cross products, vector valued functions, motion along curves, differentiation and integration of vector valued functions).
- 3. Infinite sequences and series** (divergence and convergence of series, Taylor and McLaurin series).
- 4. Functions of more than one variable** (partial differentiation, extreme values, gradients, Lagrange multiplier).
- 5. Multiple integrals**, change of order.
- 6. Change from Cartesian to polar coordinates.**
- 7. First order differential equations.**
- 8. Introduction to second order differential equations**

|                                  |   |
|----------------------------------|---|
| <b>1. Institution Name</b>       | <b>Al-Farabi University College</b>         |
| <b>2. Department Name</b>        | <b>Petroleum Engineering Department</b>     |
| <b>3. Course Code &amp; Name</b> | <b>GE202 Mathematics II</b>                 |
| <b>4. Lecture Type</b>           | <b>Hard and Soft</b>                        |
| <b>5. Semester/Year</b>          | <b>Annual / 2020-2021</b>                   |
| <b>6. No. of credit hours</b>    | <b>120 hr (4 hr/week)</b>                   |
| <b>7. Instructor Name</b>        | <b>Assistant Lecturer Tiba Nayyef Jasim</b> |

## 8. Course Objectives:

1. Understanding, predicting and optimizing engineering systems that deterministic and are modeled using differential equations.
2. Providing an introduction to differential equations and their solutions and statistics.
3. Bringing the knowledge gained and making the connection between theoretical knowledge taught in textbooks/homework problems.

etc.,

## 9. Student Learning Outcomes, Teaching/Learning Methods, and Assessment

**A. Knowledge Outcomes:** Upon completion of the course, students should be able to:

1. Know and demonstrate understanding of the concepts in an important subjects of mathematics (Polar Coordinates, Vectors, Infinite Series, Partial Differentiation, Multiple Integrals, First and Second Order Differential Equations).
2. Develop the knowledge, skills and attitudes necessary to pursue further studies in mathematics.
3. Present mathematical solutions and informative manner.
4. Use appropriate mathematical concepts and skills to solve problems in both familiar and unfamiliar situations including those in real-life contexts.

etc.,

**B. Skills Outcomes:** Upon completion of the course, students should be able to:

1. Apply statistical analysis of a variety of experimental and observational studies.
2. Derive mathematical models of physical systems.
3. Solve differential equations using appropriate methods.

etc.,

### Teaching/learning methods

1. Lectures.
2. Class problem solving.
3. Video lectures
4. Online discussion

etc.,

### Assessment methods

1. Homework problem.
2. Monthly exam.
3. Quizzes.

**C. Affective value outcomes:** Upon completion of the course, students should be able to apply:

1. Selecting and applying general rules correctly to solve problems including those in real-life contexts.
2. Developing mathematical curiosity and use inductive and deductive reasoning when solving problems.
3. Analytical methods in solving problems.

etc.,

#### **Teaching/learning methods**

1. Brain storming.
2. Encourage Critical thinking.
3. Encourage analytical thinking strategy.
4. Introduce correct research methodologies.

etc.,

#### **Assessment methods**

1. Exams.
2. Student feedback.
3. Problem recognition type.
4. Assessing skill in problem solving.

etc.,

**D. Life learning outcomes:** Upon completion of the course, students should be able to:

1. Think critically, research and reason.
2. Apply analytical and theoretical skills to model and solve mathematical problems.
3. Analyse data and draw appropriate statistical conclusions.

etc.,

### **10. Grading**

|                          |      |
|--------------------------|------|
| 1. Quizzes (2 X 4)       | 8 %  |
| 2. Discussion ( 1 X 5)   | 5 %  |
| 3. Monthly Exams (2 X 6) | 12 % |
| 4. Home Works (1 X 5)    | 5 %  |
| 5. Final Exam            | 70 % |

## (Structural & Oil Geology – 2<sup>nd</sup> year)

# Syllabus

**Course Description:** Strength and deformation of rocks; the main sedimentary structures fields, fault, joints. Environment of sedimentation. Details of oil formation, migration and accumulation; Subsurface maps of reservoirs and trap reservoir PVT.

|                        |  |
|------------------------|--|
| 1. Institution Name    | Al-Farabi University College               |
| 2. Department Name     | Petroleum Engineering Department           |
| 3. Course Code & Name  | <b>Structural &amp; Oil Geology- PE200</b> |
| 4. Lecture Type        | Direct to students                         |
| 5. Semester/Year       | Year                                       |
| 6. No. of credit hours | 2 T , 2 P                                  |
| 7. Instructor Name     | Dr. Zuhair AL Shaikh                       |

## **8. Course Objectives:**

1. Enable student to understand and interpret geological maps
- 2.
- 3.
- 4.
- etc.,

## **9. Student Learning Outcomes, Teaching/Learning Methods, and Assessment**

1. Assessment of structural maps and interpretation
- 2.
- 3.
- etc.,

## **B. Skills Outcomes: Upon completion of the course, students should be able to:**

1. Should be able to correlate between geological maps and the reservoir conditions they represent
- 2.
- 3.
- 4.
- etc.,

### **Teaching/learning methods**

- 1.
- 2.
- 3.
- 4.
- etc.,

### **Assessment methods**

- 1.
- 2.
- 3.
- 4.
- etc.,

**C. Affective value outcomes: Upon completion of the course, students should be able to apply:**

1. Should be able to correlate between geological maps and the reservoir conditions they represent
  - 2.
  - 3.
  - 4.
- etc.,

**Teaching/learning methods**

- 1.
  - 2.
  - 3.
  - 4.
- etc.,

**Assessment methods**

- 1.
  - 2.
  - 3.
  - 4.
- etc.,

**D. Life learning outcomes: Upon completion of the course, students should be able to:**

1. They should be able to use required references.
  - 2.
  - 3.
  - 4.
- etc.,

**10. Grading** according to results in a number of tests

1. Good
  2. Medium
  3. Fail
- etc.,

## 11. Course Content

| Week No. | No. of hours | Reference | Topic                           |
|----------|--------------|-----------|---------------------------------|
| 1        | 2            |           | Essential of structural geology |
| 2        | 2            |           | Essential of structural geology |
| 3        | 2            |           | Essential of structural geology |
| 4        | 2            |           | Essential of structural geology |
| 5        | 2            |           | Essential of structural geology |
| 6        | 2            |           | Source, reservoir and cap rocks |
| 7        | 2            |           | Source, reservoir and cap rocks |

**(English language)**

# Syllabus

## Course Description:

The course involves the knowledge of the parts of speech tense ,kinds of sentences , passive voice and reported speech. Moreover, course includes reading and pronunciation , solving various exercises from text books.

|                        |                                  |
|------------------------|----------------------------------|
| 1. Institution Name    | Al-Farabi University College     |
| 2. Department Name     | Petroleum Engineering Department |
| 3. Course Code & Name  | GE 110, English language         |
| 4. Lecture Type        | Theoretical lectures             |
| 5. Semester/Year       | Yearly                           |
| 6. No. of credit hours | 1 hr per week                    |
| 7. Instructor Name     | Muzahim Aziz Basi                |

## 8. Course Objectives:

1. Improving English speaking and pronunciation
2. Improving writing by using the grammar properly
3. Scientific and social communications in English language.

## 9. Student Learning Outcomes, Teaching/Learning Methods, and Assessment

**A. Knowledge Outcomes:** Upon completion of the course, students should be able to:

1. Write and read in English language properly.
2. Write scientific reports in English
3. Translate from English to Arabic and vice versa.

**B. Skills Outcomes:** Upon completion of the course, students should be able to:

1. Communication with the people in English
2. Write and read in English language properly.
3. Translate from English to Arabic and vice versa.

### Teaching/learning methods

1. Lectures .
2. Solving exercises in the text book
3. Discussion

### Assessment methods

1. Exams
2. Oral quizzes
3. Written quizzes
4. Reading and pronunciation.

**C. Affective value outcomes:** Upon completion of the course, students should be able to apply:

1. Best methods to study English language
2. Critical Thinking

## (Fluids Mechanics)

# Syllabus

### Course Description

Initially, in this course, students will be introduced to the systems of units and its dimensions that used to describe physical quantities , also it's aim to introduce students to the properties of fluids (real, ideal , Newtonian ,non- Newtonian, etc). The student will be able to identify the static forces, pressure and location of the centre of static forces also, the students will be introduced to the forces that lead to the movement of fluid. The student will be able to study and classify the flow in pipes, study the energy loss of flow, as well as pressure and flow measurement apparatuses.

|                        |                                  |
|------------------------|----------------------------------|
| 1. Institution Name    | Al-Farabi University College     |
| 2. Department Name     | Petroleum Engineering Department |
| 3. Course Code & Name  | GE 208Fluid Mechanics            |
| 4. Lecture Type        | 4-hr lecture/week +lab           |
| 5. Semester/Year       | year                             |
| 6. No. of credit hours | 4+2hour lab second half of year  |
| 7. Instructor Name     | M.Sc. Dalia Basel Abed al-tememe |

## 8. Course Objectives:

- 1-The student is able to understand the behavior of fluids according to their properties and use them appropriately.
- 2- The student will be able to calculate the flow energy in the real and ideal fluid.
- 3- Calculation of the forces acting on objects that touch the movement of fluids.
- 4-The student is able to calculate the loss in real flow energy.
- 5- The student will be able to calculate the power of pumps or turbines and the method of connecting the tank network.

## 9. Student Learning Outcomes, Teaching/Learning Methods, and Assessment

### A. Knowledge Outcomes: Upon completion of the course, students should be able to:

1. The student is prepared to receive a good scientific subject.
2. The student learns how to benefit from linking topics with equations and solving them.
3. The student learns how to apply what has been taken from scientific materials.
4. Identifying how to apply the practical aspects to the potential problems facing the petroleum engineering.
5. Consolidating the scientific material correctly by doing exams.
6. Activating the student's role in understanding and benefiting from this material to the fullest extent.

### B. Skills Outcomes: Upon completion of the course, students should be able to:

1. To familiarize the student with the skills required in their workplace as petroleum engineers.
2. the student can link topics and choose the appropriate.

### Teaching/learning methods (put your methods of teaching)

1. Lectures.
2. Class problem solving.
3. Discussion

### Assessment methods(write your assessment methods)

1. homework problem sets,
2. exams
3. lab reports
4. Quizzes

### C. Affective value outcomes: Upon completion of the course, students should be able to apply:

1. best methods to study natural sciences
2. Critical Thinking
3. Analytical methods in solving problems

### **Teaching/learning methods**

1. Brain storming
2. Encourage Critical thinking
3. Encourage analytical thinking strategy
4. Introduce correct research methodologies

### **Assessment methods**

- 1.Exams
2. Student feedback
3. body language
4. Discussions and presentations

### **D. Life learning outcomes: Upon completion of the course, students should be able to:**

1. Work within teams
2. Write academic reports
3. Analyse and verify scientific facts
4. Plan and organize time of study
5. Initiate new ideas and motivate others
6. conduct targeted searches of scholarly literature.

## **10. Grading**

|                          |     |
|--------------------------|-----|
| Quizzes (3 X 3)          | 10% |
| E-learning participation | 5%  |
| Monthly exam             | 10% |
| Home works               | 5%  |
| Laboratory               | %10 |
| Final exam               | 60% |

## 11. Course Content

| Week No.                 | No. of hours | Reference | Topic  |
|--------------------------|--------------|-----------|--|
| 1                        | 4            |           | Dimensions and units   |
| 2                        | 4            |           | Basic concepts and units, Fluid properties                   |
| 3                        | 4            |           | Newton's law of viscosity                                    |
| 4                        | 4            |           | Non-Newtonian fluids, dimensional analysis                   |
| 5                        | 4            |           | Dimensional analysis   |
| 6                        | 4            |           | Quiz1, static pressure                                       |
| 7                        | 4            |           | Static pressure and measuring pressure apparatus             |
| 8                        | 4            |           | measuring pressure apparatus, Quiz                           |
| 9                        | 4            |           | Static forces on horizontal and vertical planes              |
| 10                       | 4            |           | Static forces on inclined surfaces                           |
| 11                       | 4            |           | Static forces on inclined surfaces                           |
| 12                       | 4            |           | Quiz2, solving problem sheets                                |
| 13                       | 4            |           | Monthly exam, kinematic fluids                               |
| 14                       | 4            |           | Types of flow  |
| 15                       | 4            |           | Types of flow, quiz3   |
| 16 (second half of year) | 4+2lab       |           | Dynamic flow and types of flow (laminar and turbulent flow)  |
| 17                       | 4+2 lab      |           | Continuity and Bernoulli equation                            |
| 18                       | 4+2 lab      |           | Bernoulli equation and its modification and its applications |
| 19                       | 4+2 lab      |           | Bernoulli's equation applications                            |
| 20                       | 4+2 lab      |           | Quiz1, Flow measurements                                     |
| 21                       | 4+2 lab      |           | Flow measurements  |
| 22                       | 4+2 lab      |           | Quiz2, Flow in pipes and velocity distribution               |
| 23                       | 4+2 lab      |           | Friction losses and its types                                |
| 24                       | 4+2 lab      |           | Losses in valves and fittings                                |
| 25                       | 4+2 lab      |           | Moody chart, solving problem sheet                           |
| 26                       | 4+2 lab      |           | Quiz 3, monthly exam2  |
| 27                       | 4+2 lab      |           | pumps  |
| 28                       | 4+2 lab      |           | pumps  |
| 29                       | 4+2 lab      |           | Two phase flow   |
| 30                       | 4+2 lab      |           | Solving problem sheet  |

## (Strength of Materials)

# Syllabus

### Course Description

Initially, in this course, students will be introduced to the systems of units and its dimensions that. Which are considered as the basis of the strength of material, also its aim to introduce students the strength of materials (stress, strain, bearing, modulus of elasticity, etc.). In any engineering structure will be subjected to external forces arising from the environment in which the component works. If the component or member is in equilibrium, the resultant of the external forces will be zero but, nevertheless, they together place a load on the member which tends to deform that member and which must be reacted by internal forces which are set up within the material. If a cylindrical bar is subjected to a direct pull or push along its axis, then it is said to be subjected to tension or compression.

|                        |                                   |
|------------------------|-----------------------------------|
| 1. Institution Name    | Al-Farabi University College      |
| 2. Department Name     | Petroleum Engineering Department  |
| 3. Course Code & Name  | Strength of Materials             |
| 4. Lecture Type        | 5-hr lecture/week +lab            |
| 5. Semester/Year       | semester                          |
| 6. No. of credit hours | 4+2hour lab second half of year   |
| 7. Instructor Name     | M.Sc. Azhar ayyed marza alzubaidy |

## 8. Course Objectives:

- 1- The student is able to understand the what do you mean strength of material from according to their properties and use them appropriately.
- 2-The student will be able to calculate the stress in each section of the bar.
- 3-Calculation the deformation force per unit area of the material. It is associated with the strain. .
- 4-The student tensile Stress: Is like pulling or expansion the object on each side or might one side.
- 5- The student loads are proportional to the stresses they produce, and deformations are proportional to the strains, this also implies that, while materials are elastic, stress is proportional to strain.

## 9. Student Learning Outcomes, Teaching/Learning Methods, and Assessment

### A. Knowledge Outcomes: Upon completion of the course, students should be able to:

1. The student is prepared to receive a good scientific subject.
2. The student learns how to benefit from linking topics with equations and solving them.
3. The student learns how to apply what has been taken from scientific materials.
4. Identifying how to apply the practical aspects to the potential problems facing the petroleum engineering.
5. Consolidating the scientific material correctly by doing exams.
6. Activating the student's role in understanding and benefiting from this material to the fullest extent.

### B. Skills Outcomes: Upon completion of the course, students should be able to:

1. To familiarize the student with the skills required in their workplace as petroleum engineers.
2. the student can link topics and choose the appropriate.

### Teaching/learning methods (put your methods of teaching)

1. Lectures.
2. Class problem solving.
3. Discussion

### Assessment methods(write your assessment methods)

1. homework problem sets.
2. exams.
3. lab reports and discussion.
4. Quizzes.

**C. Affective value outcomes: Upon completion of the course, students should be able to apply:**

1. best methods to study natural sciences
2. Critical Thinking
3. Analytical methods in solving problems

**Teaching/learning methods**

1. Brain storming
2. Encourage Critical thinking
3. Encourage analytical thinking strategy
4. Introduce correct research methodologies

**Assessment methods**

- 1.Exams
2. Student feedback
3. body language
4. Discussions and presentations

**D. Life learning outcomes: Upon completion of the course, students should be able to:**

1. Work within teams
2. Write academic reports
3. Analyses and verify scientific facts
4. Plan and organize time of study
5. Initiate new ideas and motivate others
6. conduct targeted searches of scholarly literature.

**10. Grading**

|                          |          |
|--------------------------|----------|
| Quizzes (3 X 3)          | 5%       |
| E-learning participation | 5%       |
| Monthly exam             | 10% Home |
| works                    | 10%      |
| Laboratory               | %20      |
| Final exam               | 50%      |

## 11. Course Content

| Week No. | No. of hours | Reference | Topic   |
|----------|--------------|-----------|---|
| 1        | 4            |           | Dimensions and units  |
| 2        | 4            |           | Load, loading types, Stress and Strain, Hooke's law and Young's Modulus and. Ductile and Brittle Materials  |
| 3        | 4            |           | Poisson's Ratio, Shear stress, Shear strain, Bearing Stress and Modulus of rigidity.  |
| 4        | 4            |           | Stresses in thin cylinders and pressure vessels, Tangential Stress $\sigma_t$ (Circumferential Stress), Longitudinal Stress, $\sigma_L$ and Thermal Stresses. |
| 5        | 4            |           | Torsion, Simple Torsion Theory, Shear Stress and Shear Strain in Shafts, Composite Shafts-Series Connection and Composite Shafts-Parallel Connection          |
| 6        | 4            |           | Shearing Force and Bending Moment, Sign Convention for Forces and Moments, Type of supports, Types of Beams and Load Types on Beams.                          |
| 7        | 4            |           | Shear force diagram and bending moment diagram.   |
| (Lab.)   | 2lab         |           | Tensile Test  |
| (Lab.)   | 2 lab        |           | Compression Test  |
| (Lab.)   | 2 lab        |           | Torsion   |
| (Lab.)   | 2 lab        |           | Bending moment  |
| (Lab.)   | 2 lab        |           | Impact test   |

## 13. Course improvement plan

The course syllabus has been changed to be more simplified in terms of scientific theories and problems, keeping the same topics to be discussed and analyzed.

## (Thermodynamics)

**Course Description:** Teaching the student what is thermodynamics, as well as how heat transferred from body's and walls, the meaning of temperature, heat, the first law of thermodynamics, the second law of thermodynamics, Charles' law, Boyles' law, and ideal gas.

|                        |                                  |
|------------------------|----------------------------------|
| 1. Institution Name    | Al-Farabi University College     |
| 2. Department Name     | Petroleum Engineering Department |
| 3. Course Code & Name  | Thermodynamics- PE203            |
| 4. Lecture Type        | Theoretical                      |
| 5. Semester/Year       | Semester                         |
| 6. No. of credit hours | 16 hours                         |
| 7. Instructor Name     | Azhar ayed marza                 |

## 8. Course Objectives:

1. Learn how heat is transferred from body's
  2. Determine of the thermal conductivity of body's
  - 3.
  - 4.
- etc.,

## 9. Student Learning Outcomes, Teaching/Learning Methods, and Assessment

1. Understand the meaning of thermodynamics and what are its laws and how study heat transfers.
  2. Student test by homework and problem to solve by himself and Question the student during the lecture and quiz
  - 3.
  - 4.
- etc.,

## B. Skills Outcomes: Upon completion of the course, students should be able to:

1. Specific heat, thermal conductivity, thermal expansion and volume expansion of solids
  2. First law of thermodynamics, some special cases of the first law (the gasoline engine, the ideal heat engine, the Carnot cycle).
  3. The second law of thermodynamics: heat engine and the second law, refrigeration and entropy.
  - 4.
- etc.,

## Teaching/learning methods

1. Lectures.
  2. Class problem solving.
  3. Discussion.
  - 4.
- etc.,

## Assessment methods

1. Homework problem sets.
2. Exams.
3. Lab reports.
- 4.

**C. Affective value outcomes: Upon completion of the course, students should be able to apply:**

1. Best methods to study natural sciences.
  2. Critical Thinking.
  3. Analytical methods in solving problems.
  - 4.
- etc.,

**Teaching/learning methods**

1. Brain testing.
  2. Encourage Critical thinking.
  3. Encourage analytical thinking strategy.
  4. Introduce correct research methodologies.
- etc.,

**Assessment methods**

- 1.Exams.
  2. laboratory reports / studies.
  - 3.Student feedback.
  - 4.
- etc.,

**D. Life learning outcomes: Upon completion of the course, students should be able to:**

1. Work within teams.
2. Write academic reports.
3. Analyse and verify scientific facts.
4. Plan and organize time of study.
5. Initiate new ideas and motivate others.
6. conduct targeted searches of scholarly literature.

# Fundamentals of Petroleum Engineering

## Syllabus

**Course Description:** Fundamentals of Petroleum Engineering is a subject that introduces the student to origin of petroleum and the basic elements in petroleum engineering and its branches, such as production, reservoirs, drilling, wells logging, oil exploration, and fields in the country, giving them meanings basics and an overview that qualifies them to prepare for a specialization

|                        |  |
|------------------------|--|
| 1. Institution Name    | Al-Farabi University College                 |
| 2. Department Name     | Petroleum Engineering Department             |
| 3. Course Code & Name  | Fundamentals of Petroleum Engineering- PE206 |
| 4. Lecture Type        | theoretical                                  |
| 5. Semester/Year       | Yearly                                       |
| 6. No. of credit hours | 3 hrs- 4 units                               |
| 7. Instructor Name     | Asst. Lect. Ahmed A. Khudhair                |

## **8. Course Objectives:**

- 1 .Elements of petroleum engineering
- 2 .Origin of petroleum
- 3 .Reservoir rock properties and fluid distribution
- 4 .Volumetric calculation of oil in place
- 5 .Natural forces in oil and gas reservoirs
- 6 .Oil exploration
- 7 .Rotary drilling
- 8 .Rig components
- 9 .Cementing and well completion
- 10 .Well logging
- 11 .Surface equipment
12. Iraqi oil fields

## **9. Student Learning Outcomes, Teaching/Learning Methods, and Assessment**

**Recognize oil terminology and deal with engineering basics from equations and methods of general calculations in petroleum engineering in various branches.**

**B. Skills Outcomes:** Upon completion of the course, students should be able to:

- 1.
- 2.
- 3.
- 4.

etc.,

### **Teaching/learning methods**

- 1.
  - 2.
  - 3.
  - 4.
- etc.,

### **Assessment methods**

- 1.
  - 2.
  - 3.
  - 4.
- etc.,

**C. Affective value outcomes: Upon completion of the course, students should be able to apply:**

- 1.
  - 2.
  - 3.
  - 4.
- etc.,

**Teaching/learning methods**

- 1.
  - 2.
  - 3.
  - 4.
- etc.,

**Assessment methods**

- 1.
  - 2.
  - 3.
  - 4.
- etc.,

**D. Life learning outcomes: Upon completion of the course, students should be able to:**

The student shall be able to deal with the basic concepts of petroleum engineering and the ability to develop himself in any field

## **10. Grading**

1. Quiz
2. Mid Exams
3. H.W

4.C.W  
etc.,

## 11. Course Content

| Week No. | No. of hours | Reference | Topic |

# (Computer Programming)

## Syllabus

**Course Description:** Understand the concepts and terms used to describe languages, programming and solve problems using programming.

|                        |  |
|------------------------|--|
| 1. Institution Name    | Al-Farabi University College                   |
| 2. Department Name     | Petroleum Engineering Department               |
| 3. Course Code & Name  | Computer programming- GE204                    |
| 4. Lecture Type        | Online and practical in laboratory.            |
| 5. Semester/Year       | Year   |
| 6. No. of credit hours | 3 hours (1 hour online, 2 hours in laboratory) |
| 7. Instructor Name     | Akram Jabbar                                   |

## **8. Course Objectives:**

1. Learn to deal with computer programs
  2. Learn how to write programs
  3. Learn to how to solve problems by programs
  4. Learn to how to convert mathematical expressions to programs
- etc.,

## **9. Student Learning Outcomes, Teaching/Learning Methods, and Assessment**

1. Learn how to write programs
  2. Learn to how to solve problems by programs
  - 3.
  - 4.
- etc.,

### **B. Skills Outcomes: Upon completion of the course, students should be able to:**

1. solve problems by programs
  2. convert mathematical expressions to programs
  - 3.
  - 4.
- etc.,

### **Teaching/learning methods**

1. online
  2. practice in laboratory
  - 3.
  - 4.
- etc.,

### **Assessment methods**

1. home works
  2. quizzes
  - 3.
  - 4.
- etc.,

**C. Affective value outcomes: Upon completion of the course, students should be able to apply:**

1. Programs to solve problems.
2. Programs to simulate systems.
- 3.
- etc.,

#### **Teaching/learning methods**

1. online video
2. practice in laboratory
- 3.
- 4.
- etc.,

#### **Assessment methods**

1. Quizzes
2. Exams
3. Home works
4. Practical examinations
- etc.,

**D. Life learning outcomes: Upon completion of the course, students should be able to:**

1. Able to work with others to solve problems.
2. Apply knowledge that supports their academic and personal growth.
3. Seeks new information to solve problems or make informed decisions.
- 4.
- etc.,

### **10. Grading**

1. exams 20%
2. home works 10%
3. quizzes 10%
4. practical examinations 10%
5. Final Exam 50%
- etc.,

## Petroleum Properties

### Syllabus

#### Course Description:

Crude oils (chemical composition, classification, properties), density, specific gravity and coefficient of expansion, viscosity, molecular weight, vapor pressure, specific heat, latent heat, heat of combustion, boiling range, pour point, sulfur content, aniline point, penetration number, softening point, crude oil evaluation, fractional distillation and TBP curve, analysis of fraction, dehydration of crude oil, natural gas properties, oilfield water properties.

|                        |                                      |
|------------------------|--------------------------------------|
| 1. Institution Name    | Al-Farabi University College         |
| 2. Department Name     | Petroleum engineering                |
| 3. Course Code & Name  | PE201 Petroleum properties           |
| 4. Lecture Type        | 4 hours per week                     |
| 5. Semester/Year       | Semester                             |
| 6. No. of credit hours | 4                                    |
| 7. Instructor Name     | M.Sc. Marwa Hassan Ibrahim Al-bayati |

## 8. Course Objectives

1. This article deals with the study of the most important physical and chemical properties of crude oil and some of its derivatives, in addition to natural gas, and Determine conformance to specifications of crude oil.

2 .Determine proper conditions for storing and transporting crude oil and its derivatives

3. Determination of the percentage of impurities

4. Thus, the evaluation of crude oil and its derivatives for the purposes of use and export, and the determination of the quality of the oil derivative

## 9. Student Learning Outcomes, Teaching/Learning Methods, and Assessment

**A. Knowledge Outcomes:** Upon completion of the course, students should be able to:

- 1.demonstrate the ability to communicate in a professional manner.
2. exhibit the ability to work in terms / groups effectively.

**B. Skills Outcomes:** Upon completion of the course, students should be able to:

1. To familiarize the student with the skills required in their workplace as petroleum engineers
2. That the student can link topics and choose the appropriate

### Teaching/learning methods (put your methods of teaching)

1. Lectures.
2. Class problem solving.
3. Discussion

### Assessment methods (write your assessment methods)

1. homework problem sets,
2. exams
3. lab reports

**C. Affective value outcomes:** Upon completion of the course, students should be able to apply:

1. best methods to study natural sciences
2. Critical Thinking
3. Analytical methods in solving problems
- 4.

| 8        | 2            | Handbook of petroleum refinery | crude oil evaluation, fractional distillation and TBP curve   |
| 9        | 2            | Handbook of petroleum refinery | analysis of fraction, dehydration of crude oil                |
| 10       | 2            | Handbook of petroleum refinery | natural gas properties  |
| 11       | 2            | Handbook of petroleum refinery | oilfield water properties.                                    |
| 12       | 2            |                                | quizzes   |
| 13       | 2            |                                | Midterm exam  |
| 14       |              |                                |   |
| 15       |              |                                |   |

## 11. References

|                                  |  |
|----------------------------------|--|
| 1. Textbooks                     |  |
| 2. References                    | Handbook of petroleum refinery<br>Author: James G. Speight |
| 3. Recommended readings          |  |
| 4. Electronic/ Online references |  |

12. grading  
Quizzes 10%  
E-learning participation 5%  
Midterm exam 15%  
Lab 20%  
Final 50%

### 13. Course improvement plan

1. the course syllabus has been changed to be more simplified in terms of scientific theories and problems, keeping the same topics to be discussed and analyzed

## (petroleum engineering economics)

# Syllabus

### Course Description:

- .1 Studying the important topics in economic.
- .2 Understanding the classification of types of contract.
- .3 Project evaluation.
- .4 risk of reserve estimation.
5. income calculation of petroleum projects.

|                        |  |
|------------------------|--|
| 1. Institution Name    | Al-Farabi University College           |
| 2. Department Name     | Petroleum Engineering Department       |
| 3. Course Code & Name  | petroleum engineering economics- PE308 |
| 4. Lecture Type        | Theoretical lectures                   |
| 5. Semester/Year       | year                                   |
| 6. No. of credit hours | 2                                      |
| 7. Instructor Name     | Ahmed Jubair Mahmood                   |

## 8. Course Objectives:

1. Studying the important topics in economic.
2. Understanding the classification of types of contract .
3. Project evaluation.
4. risk of reserve estimation.
5. income calculation of petroleum projects.

## 9. Student Learning Outcomes, Teaching/Learning Methods, and Assessment

### Knowledge Outcomes: Upon completion of the course, students should be able to:

1. Classifying of contracts.
2. present day value calculation.
3. income calculation of petroleum projects
4. feasibility study.

### B. Skills Outcomes: Upon completion of the course, students should be able to:

1. Deal with all kinds of contracts.
2. Perform calculations regarding present day value.
3. Make decisions about the execution of petroleum projects.

### Teaching/learning methods (put your methods of teaching)

1. Lectures. ✓
2. Class problem solving. ✓
3. Discussion ✓

### Assessment methods (write your assessment methods)

1. homework problem sets, ✓
2. exams ✓

### C. Affective value outcomes: Upon completion of the course, students should be able to apply:

1. best methods to study natural sciences ✓
2. Critical Thinking ✓
3. Analytical methods in solving problems ✓

### Teaching/learning methods

1. Brain storming
2. Encourage Critical thinking
3. Encourage analytical thinking strategy

## Assessment methods

- 1.Exams
2. Student feedback

## D. Life learning outcomes: Upon completion of the course, students should be able to:

1. Work within teams
2. Write academic reports
3. Analyse and verify scientific facts
4. Plan and organize time of study
5. Initiate new ideas and motivate others

## 10. Grading

- 1.
- 2.
- 3.
- 4.
- etc.,

## 11. Course Content

| Week No. | No. of hours | Reference | Topic  |
|----------|--------------|-----------|--|
| 1        | 2            |           | Review of the important topics and definitions in economics. |
| 2        | 2            |           | Life cycle of petroleum projects                             |
| 3        | 2            |           | Contract Types of Petroleum Exploration and Production       |
| 4        | 2            |           | continued  |
| 5        | 2            |           | Investment Decisions   |
| 6        | 2            |           | Evaluation of Petroleum Projects                             |
| 7        | 2            |           | Continued  |
| 8        | 2            |           | Types of costs and cost calculation                          |
| 9        | 2            |           | continued.   |
| 10       | 2            |           | Discount cash flow   |
| 11       | 2            |           | continued  |
| 12       | 2            |           | Petroleum Companies and Economics .                          |
| 13       | 2            |           | continued  |
| 14       | 2            |           | continued  |
| 15       | 2            |           | Exam.  |
| 16       | 2            |           | Time value of money  |
| 17       | 2            |           | Continued.   |
| 18       | 2            |           | Solution of problems   |
| 19       | 2            |           | Continuous Interest  |
| 20       | 2            |           | continued  |
| 21       | 2            |           | Risk in Petroleum Economics                                  |
| 22       | 2            |           | continued.   |
| 23       | 2            |           | Risk of Reserve Estimation in petroleum Engineering          |
| 24       | 2            |           | Continued.   |
| 25       | 2            |           | Solution of problems   |
| 26       | 2            |           | Reserves Estimation .  |
| 27       | 2            |           | coninued.  |

## (Drilling Engineering I)

# Syllabus

### Course Description: (Write a Brief Description of the course)

Drilling engineering I : Is very important course for petroleum engineering , because it considered as the first step to learn and study the drilling of oil well through studding many subjects relating with this topic.

|                        |                                       |
|------------------------|---------------------------------------|
| 1. Institution Name    | Al-Farabi University College          |
| 2. Department Name     | Petroleum Engineering Department      |
| 3. Course Code & Name  | Drilling Engineering I- PE302         |
| 4. Lecture Type        | Direct                                |
| 5. Semester/Year       | year                                  |
| 6. No. of credit hours | 120                                   |
| 7. Instructor Name     | Asst. prof. dr. Faleh H. M. Almahdawi |

## 8. Course Objectives:

1. Introduction to drilling engineering
2. Drilling operations
3. Mud engineering and rheology
4. Well design and cementing

etc.,

## 9. Student Learning Outcomes, Teaching/Learning Methods, and Assessment

**A. Knowledge Outcomes:** Upon completion of the course, students should be able to:

1. Select the suitable drilling mud
2. Calculate the necessary amounts to prepare drilling mud
3. Calculate the pressures inside the well and optimum hydraulics calculations
4. Design and cementing oil well

etc.,

**B. Skills Outcomes:** Upon completion of the course, students should be able to:

1. Work as drilling engineering in oil fields
2. Lead the team on the rig.
- 3.
- 4.

etc.,

**Teaching/learning methods** (put your methods of teaching)

1. Lectures.
2. Class problem solving.
3. Discussion

4.

etc.,

**Assessment methods**(write your assessment methods)

1. homework problem sets,
2. exams
3. lab reports
- 4.

etc.,

**C. Affective value outcomes: Upon completion of the course, students should be able to apply:**

1. best methods to study natural sciences
  2. Critical Thinking
  3. Analytical methods in solving problems
  - 4.
- etc.,

**Teaching/learning methods**

1. Brain storming
2. Encourage Critical thinking
3. Encourage analytical thinking strategy
4. Introduce correct research methodologies

etc.,

**Assessment methods**

- 1.Exams
2. Student feedback
3. body language
4. laboratory reports / studies

etc.,

**D. Life learning outcomes: Upon completion of the course, students should be able to:**

1. Work within teams
2. Write academic reports
3. Analyse and verify scientific facts
4. Plan and organize time of study
5. Initiate new ideas and motivate others
6. conduct targeted searches of scholarly literature.

**10. Grading**

- 1.Theoretical part: 30 %**  
**2. lab. part : 20%**  
**3. Final exam : 50%**

## 11. Course Content

| Week No. | No. of hours | Reference                                    | Topic   |
|----------|--------------|--|---|

## **13. Course improvement plan**

- 1. Using video about the drilling operations**
- 2. Visiting the oil fields**
- 3. Development the lab using new laboratory equipment and methods**

Ministry of Higher Education

AL-Farabi University Collage

Petroleum Engineering Department

# Engineering Mathematics

## Syllabus

- 1. Differential Equations**  
(definition of ordinary and Partial differential equations , degree , order).
- 2. Solutions of Ordinary Differential Equations.**  
(first order, second order , higher order).
- 3. Applications of First Order and Second Order Differential Equations.**
- 4. Solutions of Differential Equations Using Power Series.**  
( Taylor series, Maclaurin Series)
- 5. Solutions of Differential Equations Using Laplace Transforms.**
- 6. Special Functions. (gamma function, bessel functions .**
- 7. Numerical Methods.**
- 8. Partial Differential Equations.**  
(Introduction)

|                                  |  |
|----------------------------------|--|
| <b>1. Institution Name</b>       | <b>Al-Farabi University College</b>                |
| <b>2. Department Name</b>        | <b>Petroleum Engineering Department</b>            |
| <b>3. Course Code &amp; Name</b> | <b>GE302 Engineering Mathematics</b>               |
| <b>4. Lecture Type</b>           | <b>Hard and Soft</b>                               |
| <b>5. Semester/Year</b>          | <b>Annual / 2020-2021</b>                          |
| <b>6. No. of credit hours</b>    | <b>120 hr (4 hr/week)</b>                          |
| <b>7. Instructor Name</b>        | <b>Assistant Lecturer: Mohammed Gassab Shamikh</b> |

## **8. Course Objectives:**

1. Understanding, predicting and optimizing engineering systems that deterministic and are modeled using differential equations.
2. Providing an introduction to differential equations and their solutions and statistics.
3. Bringing the knowledge gained and making the connection between theoretical knowledge taught in textbooks/homework problems.

## **9. Student Learning Outcomes, Teaching/Learning Methods, and Assessment**

### **A. Knowledge Outcomes:**

Upon completion of the course, students should be able to:

1. The ability to solve mathematical equations.
2. The ability to understand problems and use suitable equation to solve it

### **B. Skills Outcomes:**

Upon completion of the course, students should be able to:

1. Apply statistical analysis of a variety of experimental and observational studies.
2. Derive mathematical models of physical systems.
3. Solve differential equations using appropriate methods.

### **Teaching/learning methods**

1. Lectures.
2. Class problem solving.
3. Video lectures
4. Online discussion

### **Assessment methods**

1. Homework problem.
2. Monthly exam.
3. Quizzes.

### **C. Affective value outcomes:**

Upon completion of the course, students should be able to apply:

1. Selecting and applying general rules correctly to solve problems including those in real-life contexts.
2. Developing mathematical curiosity and use inductive and deductive reasoning when solving problems.
3. Analytical methods in solving problems.

### **Teaching/learning methods**

1. Brain storming.
2. Encourage Critical thinking.
3. Encourage analytical thinking strategy.
4. Introduce correct research methodologies.

### **Assessment methods**

1. Exams.
2. Student feedback.
3. Problem recognition type.
4. Assessing skill in problem solving.

### **D. Life learning outcomes:**

Upon completion of the course, students should be able to:

1. Think critically, research and reason.
2. Apply analytical and theoretical skills to model and solve mathematical problems.
3. Analyse data and draw appropriate statistical conclusions.

## **10. Grading**

|                  |      |
|------------------|------|
| 1. Quizzes       | 8 %  |
| 2. Discussion    | 5 %  |
| 3. Monthly Exams | 12 % |
| 4. Home Works    | 5 %  |
| 5. Final Exam    | 70 % |

## 11. Course Content

## 13. Course improvement plan

1. Increasing the number of textbooks so that every student can have one.
2. Inserting the electronic education as an external activity.

# (Reservoir Engineering I)

## Syllabus

### Course Description:

Petroleum Reservoir Engineering–1 is a course to teach students the principle ideas and laws of a petroleum reservoir. The course consists of two parts, Theoretical and Practical (Laboratory) lectures.

|                        |  |
|------------------------|--|
| 1. Institution Name    | Al-Farabi University College   |
| 2. Department Name     | Petroleum Engineering Department   |
| 3. Course Code & Name  | Petroleum Reservoir Engineering- PE300   |
| 4. Lecture Type        | 1- Theoretical lectures to be given to explain to students what a petroleum reservoir is, what are the types of reservoirs, what types of flow exist, what types of fluid are there and other theories of flow in the reservoir and drive mechanisms.<br>2- Laboratory lectures where students perform special experiments to measure reservoir rock and fluid properties. |
| 5. Semester/Year       | The course is yearly.  |
| 6. No. of credit hours | 1- Theoretical part of 4 hours/week.<br>2- Practical part of 2 hours/week.   |
| 7. Instructor Name     | Dr. Eng. Shamil Ibrahim Muhammed Albassam  |

#### **8. Course Objectives: The main objectives are:**

- 1. Teach the students the principle of a petroleum reservoir.**
- 2. What is a reservoir, what are its components and what are their properties.**
- 3. What are the types of drive mechanisms that exist in a Petroleum reservoir and what are the properties of each mechanism.**
- 4. How to calculate H-C in place.**
- 5. What types of fluids and fluid flow regimes are there in a reservoir, and how to calculate each type of fluid in the reservoir.**
- 6. Porosity of reservoir rocks; types of porosity and calculation.**
- 7. Permeability of reservoir rocks; types and calculation.**
- 8. Classification of H-C reservoirs according to P-T diagram.**
- 9. Fluid Saturation; principle and calculation.**
- 10. Capillary pressure phenomena; principle, calculation and calculation of WOC,FWL Depths and Transition zone thickness.**

#### **9. Student Learning Outcomes, Teaching/Learning Methods, and Assessment**

- 1. Students learn what is a petroleum reservoir, what are its properties, reservoir porosity, reservoir permeability, oil, water and gas saturation. Calculation of oil and gas in place, measurement of rock and oil properties. Fluid flow in the reservoir and its calculation.**
- 2. Teaching methods are through theoretical lectures given through which discussions are held with the students to try to give them the initiative to solve or explain scientific phenomena in oil and gas flow in the reservoir or other problems and how to solve problems that might happen during such flow systems.**
- 3. Assessments are done either by direct discussion in the class or by giving the students certain actual field case studies,**

#### **Teaching/Learning methods**

- 1. Through theoretical lectures given to them.**
- 2. Through direct discussions in the class with their lecturer.**
- 3. Explaining some real or actual case studies.**
- 4. Sometimes and if necessary, some videos are presented to explain certain cases or questions raised by students.**

### **Assessment methods**

1. Direct lectures using an overhead projector to show certain formulas, figures and pictures to explain certain subjects or items.
2. Laboratory experiments to explain how to measure certain properties of reservoir rocks and how to calculate other properties from these measurements.
3. Laboratory experiments to explain how to measure certain properties of reservoir fluids.
4. Sometimes and when possible, certain field visits are prepared to take students to the field and see live work in the field and problems faced and how to solve them in all petroleum industry fields. Usually in such visits lectures are given for certain petroleum subjects and how to deal with problems or solve them

### **C. Affective value outcomes: Upon completion of the course, students should be able to apply:**

1. Calculate oil and gas flow in the reservoir.
2. Calculate oil and gas properties like  $B_o$ ,  $B_g$ , GOR, Saturation Pressure, Gas and/or Oil Density and Gravity, Gas z-Factor Oil Density Variation with pressure inside the reservoir and other properties,
3. Be qualified to continue their 4<sup>th</sup>, Year Reservoir Engineering-2 class based on the knowledge they got in their 3<sup>rd</sup>. year Reservoir Engineering-1 class.

### **Teaching/learning methods:**

1. Direct Lectures in classroom before COVID-19.
2. Online Lectures using Google class room and Google meet system.
3. Laboratory experiments to measure reservoir rocks and fluids properties either through direct Lab. Attendance or by Google meet lectures using pdf. or ppt. lectures.
4. Sometimes. when necessary, lectures are explained using certain scientific videos.

### **Assessment methods:**

1. Home works (problem solving or report writing)
2. Quizzes
3. Monthly Exams.
4. Final Exams

5. Class discussions and answering of questions raised by the lecturer orally or on the classroom board.

**D. Life learning outcomes: Upon completion of the course, students should be able to:**

1. Calculate and solve certain subjects related to petroleum reservoirs.
2. Discuss and explain most of the phenomena related to petroleum reservoirs.
3. Be ready to continue their education in their 4<sup>th</sup>. Year course in Petroleum Reservoir Engineering-2.

**10. Grading:**

1. Class short quizzes.
2. Lab. Report writing.
3. Students class activity and participation in answering questions or solving problems.
4. Student regularity in lectures attendance.
5. Monthly or semester exams.
6. Final Exam.

**11. Course Content: No. of hours are 6 hours/week divided into 4 hours theoretical lectures and 2 hours practical Laboratory experiments and measurements.**

| <b>Week No.</b> | <b>No. of hours</b>             | <b>Reference</b>  | <b>Topic</b>   |

### **13. Course improvement plan**

- 1. Adding some new articles to explain more ideas in reservoir engineering.**
- 2. Adding more Diagrams, Pictures and Graphs to extend the understanding standard of some reservoir phenomena.**
- 3. If time will be available, I'll try to present some class seminars on certain subjects and have direct analysis done by the students to give them the courage to discuss such things in public and see the standard of their understanding of reservoir engineering principles.**

Ministry of Higher Education

AL-Farabi University Collage

Petroleum Engineering Department

جمهورية العراق

وزارة التعليم العالي والبحث العلمي

كلية الفارابي الجامعة

قسم هندسة النفط

## Technical English Syllabus

General study of English language through the use of subjects related to the specialization of the department such as: petroleum industry, petroleum exploration, drilling for oil, recovering oil, oil transportation, oil refinery, careers in the petroleum industry.

|                        |                                      |
|------------------------|--------------------------------------|
| 1. Institution Name    | Al-Farabi University College         |
| 2. Department Name     | Petroleum Engineering Department     |
| 3. Course Code & Name  | GE310 Technical English- GE303       |
| 4. Lecture Type        | Hard and Soft                        |
| 5. Semester/Year       | Annual / 2020-2021                   |
| 6. No. of credit hours | 60 hr (2 hr/week)                    |
| 7. Instructor Name     | Assistant Lecturer Tiba Nayyef Jasim |

## 8. Course Objectives:

1. Talk about business subjects.
2. understand charts and graphs
3. Write short business emails, reports and make notes on simple topics.
4. Follow short telephone conversations.
5. Follow simple presentations/demonstrations.
6. Exchange straightforward opinions and make requests.
7. Offer advice and state routine requirements

etc.,

## 9. Student Learning Outcomes, Teaching/Learning Methods, and Assessment

**A. Knowledge Outcomes:** Upon completion of the course, students should be able to:

1. Acquire the use of grammar effectively (vocabulary and so on) through extensive coursework on writing reports and reading comprehensions, articles, essays, general discussion etc.
2. To bring an awareness among the future entrepreneurs about the risks in the running enterprises.
3. To inculcate profound knowledge through BEC for practical, everyday use in business.

etc.,

**B. Skills Outcomes:** Upon completion of the course, students should be able to:

1. Assess the skills of writing business letters in various situations and generate skills of writing business letters, essays and memos.
2. Categorize the various structures of reports and compose to use them in the professional scenario.

etc.,

### Teaching/learning methods

1. Lectures.
2. Class problem solving.
3. Video lectures
4. Online discussion

etc.,

### Assessment methods

1. Homework problem.
2. Monthly exam.
3. Quizzes.

**C. Affective value outcomes:** Upon completion of the course, students should be able to apply:

1. Best methods to study language.
2. Critical Thinking

etc.,

### **Teaching/learning methods**

1. Brain storming.
2. Encourage conversation skills.
3. Introduce correct research methodologies.

etc.,

### **Assessment methods**

1. Exams.
2. Student feedback.
3. Oral examination.

etc.,

**D. Life learning outcomes:** Upon completion of the course, students should be able to:

- 1) Work within teams
- 2) Write academic reports
- 3) Write formal and informal letters
- 4) Initiate new ideas and motivate others
- 5) Conduct targeted searches of scholarly literature.

etc.,

## **10. Grading**

|                          |      |
|--------------------------|------|
| 1. Quizzes (2 X 4)       | 8 %  |
| 2. Discussion ( 1 X 5)   | 5 %  |
| 3. Monthly Exams (2 X 6) | 12 % |
| 4. Home Works (1 X 5)    | 5 %  |
| 5. Final Exam            | 70 % |

  2. Inserting the electronic education as a basic activity.
  3. Providing modern textbooks.
- etc.,

# (Well Logging)

## Syllabus

### Course Description:

The oil and gas industry records rock and fluid properties to find hydrocarbon zones in the geological formations intersected by a borehole. The logging procedure consists of lowering a "logging tool" on the end of a wireline into an oil well to measure the rock and fluid properties of the formation. An interpretation of these measurements is then made to locate and quantify potential depth zones containing oil and gas. Logging tools developed over the year's measure the electrical , acoustic ,radioactive, Electromagnetic, nuclear magnetic resonance, and other properties of the rocks and their contained fluids. Logging is usually performed as the logging tools are pulled out of the hole. This data is recorded to a printed record called a "well log" and is normally transmitted digitally to office locations. Well logging is performed at various intervals during the drilling of the well and when the total depth is drilled, which could range in depths from 300 m to 8000 m (1000 ft to 25,000 ft) or more.

|                               |                         |
|-------------------------------|-------------------------|
| <b>5. Semester/Year</b>       | <b>Year</b>             |
| <b>6. No. of credit hours</b> | <b>6 Hours</b>          |
| <b>7. Instructor Name</b>     | <b>Amjed Abdulqadir</b> |

## 8. Course Objectives:

Quantitative analysis of well logs provides the analyst with values for a variety of primary parameters such as :

1. Porosity

2. Water saturation, fluid type (oil/gas/water)

3. Lithology

4. Permeability .....etc

## 9. Student Learning Outcomes, Teaching/Learning Methods, and Assessment

**A. Knowledge Outcomes:** Upon completion of the course, students should be able to:

1. At the end of this course, the students should be able to understand the basics of borehole geophysics, theory of measurements, interpretations and applications of the different types of wireline logs.

**B. Skills Outcomes:** Upon completion of the course, students should be able to:

Students should know how to calculate the petrophysical parameters required for formation evaluation (source and reservoir rocks) through comprehensive study of modern well logging methods, open hole & cased hole log interpretation methods, production logging.

### Teaching/learning methods

1. Power Point lectures
2. Class problem solving.
3. Discussion

### Assessment methods

1. Exams
2. Lab reports
3. Scientific videos
4. Homework problems sets

**C. Affective value outcomes: Upon completion of the course, students should be able to apply:**

1. Best methods to study natural sciences
2. Critical thinking
3. Analytical methods in solving problems

#### **Teaching/learning methods**

1. Brain storming
2. Encourage critical thinking
3. Encourage analytical thinking strategy
4. Introduce correct research methodologies

#### **Assessment methods**

1. Exams
2. student feedback
3. Laboratory reports/studies

**D. Life learning outcomes: Upon completion of the course, students should be able to:**

1. Work within teams
2. Analyse and verify scientific facts
3. Plan and organize time of study
4. Initiate new ideas and motivate others

### **10. Grading**

1. Annual quest degree 30%
2. Final exam. Degree 70%

## 11. Course Content

| Week No. | No. of hours | Reference | Topic                                |
|----------|--------------|-----------|--------------------------------------|
| 1        | 4            | 3         | Exploration with wire logs           |
| 2        | 4            | 3         | Measurements while drilling basics   |
| 3        | 4            | 2         | SP & GR Logs                         |
| 4        | 4            | 1         | Resistivity logs-1                   |
| 5        | 4            | 1         | Resistivity logs-2                   |
| 6        | 4            | 2         | Porosity logs :Sonic logs            |
| 7        | 4            | 2         | Porosity logs: Density &Neutron logs |
| 8        | 4            | 2         | Hingle & Picketts plots              |

### **13. Course improvement plan**

**At the end of this course, the students should be able to understand the basics of borehole geophysics, theory of measurements, interpretations and applications of the different types of wireline logs including all the new development tools which enter in the actual services.**

Ministry of Higher Education

AL-Farabi University Collage

Petroleum Engineering Department

**(Geophysics – 3rd year)**

## **Syllabus**

**Course Description:** Brief discussion of the three geophysical methods: gravity, magnetic and seismic as applied in oil exploration

|                        |                              |
|------------------------|------------------------------|
| 1. Institution Name    | Al-Farabi University College |
| 2. Department Name     | Pet. Engineering             |
| 3. Course Code & Name  | Geophysics                   |
| 4. Lecture Type        | Direct to students           |
| 5. Semester/Year       | semester                     |
| 6. No. of credit hours | 3                            |
| 7. Instructor Name     | Dr. Zuhair AL Shaikh         |

## **8. Course Objectives:**

1. Enable student to understand and analyses results from the exploration methods
- 2.
- 3.
- 4.
- etc.,

## **9. Student Learning Outcomes, Teaching/Learning Methods, and Assessment**

1. Assessment of results of geophysical exploration
- 2.
- 3.
- etc.,

## **B. Skills Outcomes: Upon completion of the course, students should be able to:**

1. They become able to read and try interpreting geophysical maps.
- 2.
- 3.
- etc.,

### **Teaching/learning methods**

1. Lectures and report writing on the subject
- 2.
- 3.
- 4.
- etc.,

### **Assessment methods**

1. Weekly and monthly tests.
2. Oral discussion.
- 3.
- 4.
- 5.
- etc.,

**C. Affective value outcomes: Upon completion of the course, students should be able to apply:**

1. They become able to read and try interpreting geophysical maps.
- 2.
- 3.
- etc.,

**Teaching/learning methods**

1. As above
- 2.
- 3.
- 4.
- etc.,

**Assessment methods**

1. As above
- 2.
- 3.
- 4.
- etc.,

**D. Life learning outcomes: Upon completion of the course, students should be able to:**

1. They should be able to use the references they may need.
- 2.
- 3.
- 4.
- etc.,

**10. Grading** according to results in a number of tests

1. Yearly work 30%
2. Final exam 70%

etc.,

## 11. Course Content

| Week No. | No. of hours | Reference | Topic    |
|----------|--------------|-----------|----------|
| 1        | 3            |           | Gravity  |
| 2        | 3            |           | Gravity  |
| 3        | 3            |           | Gravity  |
| 4        | 3            |           | Gravity  |
| 5        | 3            |           | Gravity  |
| 6        | 3            |           | Seismic  |
| 7        | 3            |           | Seismic  |

## Numerical Method and Reservoir Simulation

### Syllabus

- 1. Interpolation.**  
(Linear, Lagrange).
- 2. Matrices.**  
(review of matrix properties, determinants, inverse of matrix).
- 3. Solution of System of Linear Equations.**  
(Gaussian Elimination, Gauss Jordan Method).
- 4. Iterative Methods.**  
(Jacobi and , Gauss Seidel methods).
- 5. Least Squares Method.**  
(Linear, Polynomial)
- 6. Reservoir Simulation.**  
(Introduction)
- 7. Principles of Fluid Flow through Porous Medium.**
- 8. Flow Equation.**
- 9. Finite Difference methods.**  
(Taylor Series, Forward Difference, Backward Difference, Central Difference  
Central Difference, concepts of explicit and implicit methods)
- 10. Solution of System of Difference Equations.**  
(tridiagonal algorithm)
- 11. Irregular gridding.**
- 12. Transmissibility, the Finite Difference form of flow equation in terms of transmissibility.**
- 13. Averaging**

|                                  |  |
|----------------------------------|--|
| <b>1. Institution Name</b>       | <b>Al-Farabi University College</b>                    |
| <b>2. Department Name</b>        | <b>Petroleum Engineering Department</b>                |
| <b>3. Course Code &amp; Name</b> | <b>PE408 Numerical Method and Reservoir Simulation</b> |
| <b>4. Lecture Type</b>           | <b>Hard and Soft</b>                                   |
| <b>5. Semester/Year</b>          | <b>Annual / 2020-2021</b>                              |
| <b>6. No. of credit hours</b>    | <b>120 hr (4 hr/week)</b>                              |
| <b>7. Instructor Name</b>        | <b>Assistant Lecturer : Mohammed Gassab Shamikh</b>    |

## 8. Course Objectives:

1. Learning how to derive the partial differential equations that governing the flow in porous media.
2. Learning how to solve numerically the partial differential equations that governing the flow in porous media.
3. Providing an introduction to differential equations and their solutions and statistics.
4. Bringing the knowledge gained and making the connection between theoretical knowledge taught in textbooks/homework problems.

## 9. Student Learning Outcomes, Teaching/Learning Methods, and Assessment

### A. Knowledge Outcomes:

Upon completion of the course, students should be able to:

- Applying reservoir simulation techniques to predict future behaviour of petroleum reservoirs.

### B. Skills Outcomes:

Upon completion of the course, students should be able to:

- The students will gain insight into the workings of today's reservoir simulation software, their formulation and solution methods.
- The students will be able to communicate this know how to others and pursue further his/her own development within the subject.

### Teaching/learning methods

1. Lectures.
2. Class problem solving.
3. Video lectures
4. Online discussion

### Assessment methods

1. Homework problem.
2. Monthly exam.
3. Quizzes.

### C. Affective value outcomes:

Upon completion of the course, students should be able to apply:

1. Selecting and applying general rules correctly to solve problems including those in real-life contexts.

2. Developing mathematical curiosity and use inductive and deductive reasoning when solving problems.
3. Analytical methods in solving problems.

### **Teaching/learning methods**

1. Brain storming.
2. Encourage Critical thinking.
3. Encourage analytical thinking strategy.
4. Introduce correct research methodologies.

### **Assessment methods**

1. Exams.
2. Student feedback.
3. Problem recognition type.
4. Assessing skill in problem solving.

### **Life learning outcomes:**

Upon completion of the course, students should be able to:

1. Think critically, research and reason.
2. Apply analytical and theoretical skills to model and solve mathematical problems.
3. Describe the various difference methods which are used to solve the transport equations applied in reservoir simulation software.
4. Describe the different linear equation solvers solution methods used in reservoir simulators.
5. Argue for the consequence for stability and dispersion when applying reservoir simulation software.

## **10. Grading**

|                  |      |
|------------------|------|
| 1. Quizzes       | 5 %  |
| 2. Monthly Exams | 20 % |
| 3. Home Works    | 5 %  |
| 4. Lab.          | 20%  |
| 5. Final Exam    | 50 % |

| <b>11. Course Content</b> |                     |   |  |

## (Secondary Oil Recovery)

# Syllabus

**Course Description:** ( This course explains the secondary and tertiary oil production methods. Choose the most appropriate methods. Determining the amount of oil recovery through each method )

|                        |                                  |
|------------------------|----------------------------------|
| 1. Institution Name    | Al-Farabi University College     |
| 2. Department Name     | Petroleum Engineering Department |
| 3. Course Code & Name  | PE406 Secondary Oil Recovery     |
| 4. Lecture Type        | Theoretical                      |
| 5. Semester/Year       | year                             |
| 6. No. of credit hours | 3                                |
| 7. Instructor Name     | Ghassan Husham jani              |

## 8. Course Objectives:

1. Learn about secondary and tertiary methods
2. Choosing the best possible method
3. Recognize the efficiency of each method
- 4.
- etc.,

## 9. Student Learning Outcomes, Teaching/Learning Methods, and Assessment

**A. Knowledge Outcomes:** Upon completion of the course, students should be able to:

1. Distinguish between secondary and tertiary methods of oil production
2. Know the determinants of each method
3. Ability to distinguish the amount of extraction possible by using each method

**B. Skills Outcomes:** Upon completion of the course, students should be able to:

1. Distinguish between secondary and tertiary methods of oil production
2. Know the determinants of each method
3. Ability to distinguish the amount of extraction possible by using each method

**Teaching/learning methods** (put your methods of teaching)

1. Lectures.
2. Class problem solving.
3. Discussion

**Assessment methods** (write your assessment methods)

1. homework problem sets,
2. exams
3. reports

**C. Affective value outcomes: Upon completion of the course, students should be able to apply:**

1. best methods to study natural sciences
2. Critical Thinking
3. Analytical methods in solving problems
4. The ability to discuss and accept opinions to choose the best methods
5. The ability to cooperate and participate in the decision

**Teaching/learning methods**

1. Lectures.
2. Class problem solving.
3. Discussion

**Assessment methods**

1. Discussion
2. oral exam
3. the exam
4. periodic reports

**D. Life learning outcomes: Upon completion of the course, students should be able to:**

1. Distinguish between secondary and tertiary methods of oil production
2. Know the determinants of each method
3. Ability to distinguish the amount of extraction possible by using each method

**10. Grading**

- 1.
  - 2.
  - 3.
  - 4.
- etc.,

## 11. Course Content

| Week No. | No. of hours | Reference   | Topic  |
|----------|--------------|---|--|
| 1        | 3            | Enhanced oil recovery                             | Principles and definitions choice of proper methods for enhanced oil recovery        |
| 2        | 3            | Enhanced oil recovery                             | Recovery by water displacement, Buckley-Leverett method, Welge method, Stiles method |
| 3        | 3            | Enhanced oil recovery                             | Original and improved Dykstra-Parsons method, Pattern of flooding                    |
| 4        | 3            | Enhanced oil recovery                             | Sweep efficiency   |
| 5        | 3            | Enhanced oil recovery                             | Properties of injected water, Injected pressures                                     |
| 6        | 3            | Enhanced oil recovery                             | Recovery by immiscible gas   |
| 7        | 3            | Enhanced oil recovery                             | Turner method, Muskat method, Recovery by miscible gas                               |
| 8        | 3            | Applied Petroleum Reservoir Engineering by Ronald | Dry gas injection, Enriched gas injection  |
| 9        | 3            | Applied Petroleum Reservoir Engineering by Ronald | CO <sub>2</sub> injection, N <sub>2</sub> injection                                  |
| 10       | 3            | Applied Petroleum Reservoir Engineering by Ronald | Thermal recovery, heat flow through rocks  |
| 11       | 3            | Applied Petroleum Reservoir Engineering by Ronald | Steam injection  |
| 12       | 3            | Applied Petroleum Reservoir Engineering by Ronald | In-situ combustion   |
| 13       | 3            | Applied Petroleum Reservoir Engineering by        | Tertiary oil recovery  |

|           |          |  |   |
|-----------|----------|--|---|
|           |          | <b>Ronald</b>  |   |
| <b>14</b> | <b>3</b> | <b>Applied Petroleum Reservoir Engineering by Ronald</b> | <b>Surfactant flooding, Solvent injection</b> |
| <b>15</b> | <b>3</b> | <b>Applied Petroleum Reservoir Engineering by Ronald</b> | <b>Polymer injection.</b>                     |

## **12. References**

( 4<sup>th</sup> year **ENGLISH LANGUAGE**)

## Syllabus

**Course Description:** studding language, vocabulary, reading, speaking and writing of some advanced English literature.

|                        |                                  |
|------------------------|----------------------------------|
| 1. Institution Name    | Al-Farabi University College     |
| 2. Department Name     | Petroleum Engineering Department |
| 3. Course Code & Name  | English language                 |
| 4. Lecture Type        | theoretical                      |
| 5. Semester/Year       | Year                             |
| 6. No. of credit hours | One                              |
| 7. Instructor Name     | Dr. Zuhair D. AL shaikh          |

## 8. Course Objectives:

1. To study advance scientific work
  - 2.
  - 3.
  - 4.
- etc.,

## 9. Student Learning Outcomes, Teaching/Learning Methods, and Assessment

**A. Knowledge Outcomes:** Upon completion of the course, students should be able to:

1. To enable students to read and understand scientific papers .
  - 2.
  - 3.
- etc.,

**B. Skills Outcomes:** Upon completion of the course, students should be able to:

1. To write summary of the papers they read
  - 2.
  - 3.
  - 4.
- etc.,

**Teaching/learning methods** All methods

1. Lectures.
  2. Class problem solving.
  3. Discussion
  - 4.
- etc., >

## Assessment. ( All methods)

1. homework problem sets,
  2. exams
  3. lab reports
  - 4.
- etc.,

**C. Affective value outcomes: Upon completion of the course, students should be able to apply:**

1. **best methods to study natural sciences**

**Teaching/learning methods ( as above)**

- 1.
  - 2.
  - 3.
  - 4.
- etc.,

**Assessment methods (as above)**

- 1.
  - 2.
  - 3.
  - 4.
- etc.,

**D. Life learning outcomes: Upon completion of the course, students should be able to: (**

1. **As above**
  - 2.
  - 3.
  - 4.
- etc.,

## **10. Grading**

1. **30 % yearly**
  2. **70% final exam**
  - 3.
  - 4.
- etc.,

## 11. Course Content

| Week No. | No. of hours | Reference | Topic                      |
|----------|--------------|-----------|----------------------------|
| 1        | 15           | 1         |                            |
| 2        |              |           |                            |
| 3        |              |           |                            |
| 4        |              |           | From unit one to unit four |
| 5        |              |           |                            |
| 6        |              |           |                            |

(Gas technology)

# Syllabus

## Course Description

Gas technology course provide the students information about the types of the natural gases , type of the gas reservoirs , gas pipe lines , flow performance of gas reservoirs and the methods of removing liquid from gas wells , in addition , methods of calculating the wellhead pressure and bottom hole pressure

|                        |                                  |
|------------------------|----------------------------------|
| 1. Institution Name    | Al-Farabi University College     |
| 2. Department Name     | Petroleum Engineering Department |
| 3. Course Code & Name  | PE401-gas technology             |
| 4. Lecture Type        | Theoretical lectures             |
| 5. Semester/Year       | Semester                         |
| 6. No. of credit hours | 3 hrs                            |
| 7. Instructor Name     | Layla Sideeq Mohammed            |

## 8. Course Objectives:

1. To make students familiar with problem of unconventional reservoirs
2. To give students information about the method of increasing gas recovery

## 9. Student Learning Outcomes, Teaching/Learning Methods, and Assessment

**A. Knowledge Outcomes:** Upon completion of the course, students should be able to:

1. Students will be able to solve the urgent problems in the fields
2. Student have an ability to work as a team
- 3.

**B. Skills Outcomes:** Upon completion of the course, students should be able to:

1. Thinking quickly and effectively
2. Giving a practical decisions in the field
- 3.

### Teaching/learning methods (put your methods of teaching)

1. Lectures.
  2. Class problem solving.
  3. Discussion
  - 4.
- etc.,

### Assessment methods (write your assessment methods)

1. homework problem sets,
  2. exams
  3. lab reports
  - 4.
- etc.,

**C. Affective value outcomes:** Upon completion of the course, students should be able to apply:

1. best methods to study natural sciences
  2. Critical Thinking
  3. Analytical methods in solving problems
  - 4.
- etc.,

قسم هندسة النفط

( **production engineering** )

## Syllabus

**Course Description:** petroleum production engineering provide the students with the basics of drive mechanisms , reservoir types, IPR , fluid flow through pipes, well testing , wells productivity stimulation and artificial lift methods

|                        |  |
|------------------------|--|
| 1. Institution Name    | Al-Farabi University College             |
| 2. Department Name     | Petroleum Engineering Department         |
| 3. Course Code & Name  | PE404 - petroleum production engineering |
| 4. Lecture Type        | Theoretical lectures                     |
| 5. Semester/Year       | yearly                                   |
| 6. No. of credit hours | 5 hrs- 6 units                           |
| 7. Instructor Name     | Layla Sideeq Mohammed                    |

## 8. Course Objectives:

1. To make student familiar with the production operation
2. To give an opportunity for students to learn the advanced stimulation methods
3. Learning the students the most modern methods of artificial methods

## 9. Student Learning Outcomes, Teaching/Learning Methods, and Assessment

**A. Knowledge Outcomes:** Upon completion of the course, students should be able to:

1. Work as a team effectively
2. Solving practical problems
- 3.

**B. Skills Outcomes:** Upon completion of the course, students should be able to:

1. Dealing with urgent problems in the field
2. Giving suitable quick and decision in the field

**Teaching/learning methods** (put your methods of teaching)

1. Lectures.
  2. Class problem solving.
  3. Discussion
  - 4.
- etc.,

**Assessment methods** (write your assessment methods)

1. homework problem sets,
  2. exams
  3. lab reports
  - 4.
- etc.,

**C. Affective value outcomes:** Upon completion of the course, students should be able to apply:

1. best methods to study natural sciences
  2. Critical Thinking
  3. Analytical methods in solving problems
  - 4.
- etc.,

## Petroleum Drilling Engineering II

### Syllabus

#### Course Description:

Initially, in this course, students will be introduced to the directional drilling history, applications, calculations, and planning directional wells, students will analyse the factors that affect the Rate of Penetration. discussed hole problems in general and concentrate on the stuck pipe and loss circulation during drilling oil and gas wells.in addition, continue to calculate hydraulic calculations. Finally, study well control basic steps and methods.

|                        |   |
|------------------------|---|
| 1. Institution Name    | Al-Farabi University College                    |
| 2. Department Name     | Petroleum Engineering                           |
| 3. Course Code & Name  | <b>Petroleum Drilling Engineering II- PE402</b> |
| 4. Lecture Type        | 5-hr lecture/wk                                 |
| 5. Semester/Year       | Two semesters 2021-2022                         |
| 6. No. of credit hours |   |
| 7. Instructor Name     | Dr. ABDULLAH JALAL MOHAMMED                     |

## 8. Course Objectives:

1. To develop advanced drilling engineer practice-level.
2. To have students become familiar with types of oil and gas wells.
3. Develop time management skills and teamwork spirit in students

## 9. Student Learning Outcomes, Teaching/Learning Methods, and Assessment

1. Demonstrate the ability to analyze and solve advanced drilling engineer problems.
2. Demonstrate the ability to communicate analysis in a professional manner.
3. Exhibit the ability to work in teams/groups effectively

### B. Skills Outcomes: Upon completion of the course, students should be able to:

1. Analyze the nature of the problem during drilling the oil wells.
2. Planning directional oil wells.
3. well control during when Kick occurs.
4. knowing the factors that affect the Rate of Penetration.
5. Present problem solutions in a professional manner.

#### Teaching/learning methods

1. Lectures.
2. Class problem solving.
3. Discussion

#### Assessment methods

1. Assignment problem sets,
2. Exams
3. Quizzes

### C. Affective value outcomes: Upon completion of the course, students should be able to apply:

1. Best methods to study drilling Eng.
2. Critical Thinking
3. Analytical methods in solving problems

#### Teaching/learning methods

1. Brainstorming
2. Encourage Critical thinking
3. Encourage analytical thinking strategy
4. Introduce correct research methodologies

| Assessment methods   |
|--|
| <ol style="list-style-type: none"> <li>1.Exams</li> <li>2. Student feedback</li> <li>3. body language</li> <li>4. Discussions and presentations</li> </ol>   |
| <p>D. Life learning outcomes: Upon completion of the course, students should be able to:</p> <ol style="list-style-type: none"> <li>1. Work within teams</li> <li>2. Write academic reports</li> <li>3. Analyse and verify scientific facts</li> <li>4. Plan and organize time of study</li> <li>5. Initiate new ideas and motivate others</li> <li>6. conduct targeted searches of scholarly literature.</li> </ol> |

| 10. Grading              |     |
|--------------------------|-----|
| Quizzes (3 X 3)          | 10% |
| E-learning participation | 5%  |
| Midterm Exam             | 15% |
| Final Exam               | 70% |

## 11. Course Content

| Week No. | No. of hours | Reference            | Topic                                    |

### 13. Course improvement plan

- 1 .The course syllabus doesn't include the has the latest practice of drilling engineers.
2. This course is based on literature information problems without any use of computer software.

Ministry of Higher Education

(reservoir engineering II)

# Syllabus

## Course Description: (Write a Brief Description of the course)

- Studying the important topics in reservoir engineering.
- Understanding the classification of hydrocarbon reservoirs using the P-T diagram.
- Derive the material balance equation and practice the related calculations.
- Studying the different types of hydrocarbon reservoirs and their related calculations.
- The water drive reservoirs types and calculations.

|                       |                                  |
|-----------------------|----------------------------------|
| 1. Institution Name   | Al-Farabi University College     |
| 2. Department Name    | Petroleum Engineering Department |
| 3. Course Code & Name | Reservoir engineering II- PE400  |
| 4. Lecture Type       | Theoretical                      |
| 5. Semester/Year      | year                             |

|                               |                      |
|-------------------------------|----------------------|
| <b>6. No. of credit hours</b> | <b>five</b>          |
| <b>7. Instructor Name</b>     | Ahmed Jubair Mahmood |

## 8. Course Objectives:

1. Studying the important topics in reservoir engineering.
2. Understanding the classification of hydrocarbon reservoirs using the P-T diagram.
3. Derive the material balance equation and practice the related calculations.
4. Studying the different types of hydrocarbon reservoirs and their related calculations.
5. The water drive reservoirs types and calculations.

## 9. Student Learning Outcomes, Teaching/Learning Methods, and Assessment

### Knowledge Outcomes: Upon completion of the course, students should be able

- to:
1. Classify the hydrocarbon reservoirs and their driving mechanism.
  2. Derivation of the material balance equation and calculation.
  3. Calculation of oil and gas in place, recovery, produced oil and gas and the remaining of oil and gas for all the types of hydrocarbon reservoirs.
  4. Calculating the volume of water encroached using different methods.

### B. Skills Outcomes: Upon completion of the course, students should be able to:

1. Deal with all kinds of reservoir.
2. Perform calculations regarding the different types of hydrocarbon reservoirs.
3. Make decisions about the driving mechanisms.

### Teaching/learning methods (put your methods of teaching)

1. Lectures. ✓
2. Class problem solving. ✓
3. Discussion. ✓

### Assessment methods (write your assessment methods)

1. homework problem sets, ✓
2. exams ✓

### C. Affective value outcomes: Upon completion of the course, students should be able to apply:

1. best methods to study natural sciences ✓
2. Critical Thinking ✓
3. Analytical methods in solving problems ✓

### Teaching/learning methods

1. Brain storming
2. Encourage Critical thinking
3. Encourage analytical thinking strategy

## Assessment methods

- 1.Exams
2. Student feedback

## D. Life learning outcomes: Upon completion of the course, students should be able to:

1. Work within teams
2. Write academic reports
3. Analyse and verify scientific facts
4. Plan and organize time of study
5. Initiate new ideas and motivate others

## 10. Grading

- 1.
  - 2.
  - 3.
  - 4.
- etc.,

## 11. Course Content

| Week No. | No. of hours | Reference | Topic  |
|----------|--------------|-----------|--|
| 1        | 5            |           | Review of the important topics and definitions in reservoir engineering.   |
| 2        | 5            |           | Reservoir fluids properties, gas oil and water. $B_o, B_g, R_s, \mu_o, \mu_g$ relations with pressure and temperature. |
| 3        | 5            |           | Calculations related to the reservoir fluids properties.   |
| 4        |              |           | continued  |
| 5        | 5            |           | Classification of the petroleum reservoirs according the P-T relation.   |
| 6        | 5            |           | Types of natural driving mechanisms, liquid expansion, depletion, gas cap, water and combination drive.                |
| 7        | 5            |           | Material balance derivation.   |
| 8        |              |           | continued  |
| 9        | 5            |           | Calculations using the material balance.   |
| 10       | 5            |           | Material balance as a straight line.   |
| 11       | 5            |           | Gas reservoir, dry gas reservoirs-properties and MB calculations.  |
| 12       | 5            |           | Gas storage reservoirs, wet gas reservoirs.  |
| 13       |              |           | continued  |
| 14       | 5            |           | Calculations related to dry gas, wet gas and storage gas reservoirs.   |
| 15       | 5            |           | continued  |
| 16       |              |           | Retrograde gas reservoirs.   |
| 17       |              |           | Continued.   |
| 18       |              |           | Solution of problems for retrograde gas reservoirs gas res.  |
| 19       |              |           | Under saturated oil res., volumetric calculations.   |
| 20       |              |           | Under saturated oil res., material balance calculations.   |
| 21       |              |           | Under saturated oil res., including formation and water Compressibility.   |
| 22       |              |           | Solution of problems.  |
| 23       |              |           | Saturated oil reservoirs   |
| 24       |              |           | Application of material balance for sat. oil res.  |
| 25       |              |           | Solution of problems   |
| 26       |              |           | Water influx, steady state method.   |
| 27       |              |           | Van -Everdingin method.  |
| 28       |              |           | Fetchovich method  |

|    |  |  |            |
|----|--|--|------------|
| 29 |  |  | evaluation |
| 30 |  |  | Exams.     |
