Teaching

Tax Accounting: It represents one of the branches of accounting science in which accounting and tax laws are linked in order to reconcile the accounting system of the project and the laws and regulations stipulated by tax systems, which may conflict with the rules of accounting science.

International Accounting Standards: A unified set of principles and procedures for international financial reporting and accounting, to be understood, applicable and universally accepted, issued by the International Accounting Standards Board of the non-governmental and non-profit International Accounting Standards Organization, which is based in the United Kingdom.

Managerial Accounting: It is one of the renewable sciences due to its large number of arts, methods, visions and analyzes that keep pace with the requirements of the contemporary business environment, as it sought to find out what the management of the facility needs from the data for internal use in order to provide it to help its management in making decisions. Statistical and basic data for managers and workers inside the facility, which enables them to make daily and short-term decisions. In this regard, the Administrative Accounting Committee emanating from the National Accounting Association has set the definition of management accounting as:

(An information system that works on identifying, measuring and communicating the information used by the administration in performing its functions).

Research Focus

1. In the areas of management accounting and how to adopt electronic information data in its application.
2. How to apply the costing mechanisms programmatically in industrial, service and commercial establishments.
3. The application of accounting information systems in drawing records and the way institutions work through computer programs designated for this purpose.
