Teaching

Financial management for students of the third stage / Department of Accounting and Banking Sciences / Financial management is a science that combines the science of finance with its branches related to finance and investment on the one hand, and mathematics on the other hand. Investing in the shares of private joint stock companies, and identifying the various sources of financing (the owner and the borrower).

Financial derivatives for students of the fourth stage / Department of Accounting and Banking Sciences / The study of financial derivatives is concerned with measuring the risk of a particular contract being financial contracts derived from the value of the

underlying asset (shares, bonds, currencies, commodities..... etc.), and aims to identify the risks represented by investment and speculation. Hedging and arbitrage due to the use of contract classifications (options, futures, swaps, futures), as well as earning revenues in exchange for reducing costs.

Management and Organization for students of the fourth stage / Department of Design
/ The study of management and organization is concerned with project management using the manager's functions (planning, organizing, directing and control) using the organization's resources (material, financial, information and technology) and achieving the organization's goals efficiently and effectively, and knowing the organization's functions (the basic ones represented in managing Human resources, marketing, finance, production and operations, and support, represented by research and development, public relations, and other activities (legal, advisory and office). And addressing a set of theories of management scientists and their application to design projects.
