Teaching

Architectural design (first year):

Introducing the student to the concept of architecture by identifying the principles of design, architectural composition, the third dimension, architectural space, the human scale, and others. And the development of the language of expression of those vocabulary and the development of the artistic and formative sense of the student.

Architectural drawing (first year):

Architectural drawing is one of the most important means of expressing the architect's design ideas. The course aims to build and develop the student's expressive skills, in addition to training him in the use of different materials and techniques in presentation.

Architectural drawing and rendering (second year):

Develop students' skills to express their design ideas and present them in an appropriate manner. This course is a continuation of what the student received in the first grade on the same subject, with a special focus on 3D architectural drawings. With the use of various means of architectural presentation (presentation) using ink, colored wooden pens, watercolors, collage, pantone and other well-known means.

Building Construction (second year):

Introducing the student to the most important structural systems in general, and focus on the solid structural system and structural details using bricks that appropriate to the local environment.
